THE PERFECT

# Horse-Man.

The Office of the Breeder.

Observations in Breeding of HORSES.

ftring, or tread the old paths in which I walked in my first years.
But let them not deceive themelves: the Meanders and Windings in which now labour, are of new discovery; and lowsoever I may now and then come under he same height, yet shall he that follows me, ind it so removed, that it shall bring him a nuch nearer way to his journeys end. For in nese short Essays, I have striven only to amend

mend errors overflipt before, and to acquaint my Friends with all those uncontroulable experiments which I have found out since in forty years and more: And believe it, he is an ill Proficient, that in such a time cannot find (in the Art he professeth) something worthy his Friends acceptation. Therefore thus to my Breeder.

#### Choice of Grounds.

The Grounds-to breed on would be spatisous, and not strait, for Horses joy not in Cages. There accommodate according to your Stock; and though the more the merrice, yet the sewer the better fare. They would not be extreme sertile, nor extreme barren; the golden number is the best temper: yet to incline a little to hardness, is better than much rankness; the one breeds health, the other diseases.

Let the Scituation be ascending, the Air pure, the Laire dry, and the Foot-tread firm,

no matter how rough or incertain.

As much Ground as will keep a Milcha Cow, will keep a Milch-Mare, and a great deal less when she is barren or unwrought.

ought.

Cha

Again, as Change of Pasture makes fat Calves, so Alteration of Grounds raises gallant Colts. Therefore strive to have one Ground to Foal in, another to Summer in, and a third to Winter in. The first to be without danger, the second not without shelter, and the third desended from storms and tempests by Trees, Hovel, Shed, Barn or Backstable, wherein may be stored Winter-provision.

Thus far for those which have ability. But for them which must breed for necessity, let his Yard, Back-side, or Stable serve to Foal in, the white Corn-fields to Summer in, and the Cratch or Stand-heck to Winter at.

#### Choice of Stallions and Mares.

Next the Change of Grounds, I place the Choice of Stallions and Mares, which is a Theme I have so oft written of, that I must needs refer the Curious to those larger Volumns, and only, in this place say, That for as much as all men covet to be governed by their own passions, therefore I leave them to their own choice, and the end for which they breed; yet advising them, that of those Races

of which they make election, they choose the best and ablest, the highest spirited, the fairest coloured, and the finest shaped; whether it be Neapolitan, Turk, Spaniard, Barbary, English, Dutch, Polander, French or German. And because it is impossible to find out absolute perfection, I would have our Breeder to inform himself well of all the natural defects that can be found in the Stallion, and to amend them in the Mare that shall be joyned with him; and what is amis in the Mare, to fee it repaired in the Horse.

For any fingular election of Mares, the Breeder need not be too curious; only obferve, that if you can get true breed, you then pals by the bastard; if you may have the Gentleman, never make use of the Clown. But when you are tyed by necessity or compulfion, then see the Mare have a good forehead, a large womb, found limbs, fair colour, and good metal. For the rest, let Nature alone, she

is a brave Mistress.

Now, for those Breeders which look not fo much into the breed and generation of the · Horse, as into his actions and good dayes works; accounting because he hath won such a wager, or beaten such a Horse, therefore he must necessarily be an excellent Stallion: Let them know they are deceived; for this is no good consequence; no more than if a

robustuous

are

Mares

then the

own. npul-

lead,

and

e, she

k 110t

dayes

n luch

eretore

allion:

111 if a

ultuous

robustuous strong skilful Clown should give a weak unskilful Gentleman a Fall, therefore all the Clown-bred should be excellent Wrastlers. This can hold for no Maxim; for I am perswaded, that let a Gentleman have either skill to encounter strength, or strength to encounter skill, there is no Clown that can foil him. In like manner, a Clown-horse by training, feeding and riding, may beat a true bred Horse; but when they encounter upon equal terms, Truth will shew her self for a Mistress. Therefore in this case of Breeding, get as near as you can true Breed, and it will seldom or never bring forth Repentance.

#### The Age of Stallions and Mares.

A Horse may beget good Colts from sour years old to sourteen; after he declineth: And a Mare may bring forth from three years old to thirteen, and then she decayeth: yet are neither utterly lost, but both may be made to serve for the same use a much longer season.

Moderate labour is good for Breed of Mares, when they go over; for it maketh them apt to take the Horse, and soon to conceive.

Вз

When

#### When to put Horse and Mare together.

The absolute best time to put the Horse and Mares together, is the beginning of March, provided there be strength and lust in both. For, the earlier the Foal falleth, finding no want or scarceness, the better Horse is ever produced. And so consequently from the beginning of May; the Foals that fall after such a time, cannot chuse but have imperfection in some condition. For they have two great enemies to encounter withal (not before known) which daily fall upon them, that is, Hunger and Cold, with which the early Foal hath been before familiar.

There be some Horsemen which hold, that the Lammas Foal proves ever an excellent Horse; and I dissent not from it, where there is plenty and sulness of keeping; for he knows the worst of Winter before Summer appear, and so may be good and hard; but if he chance to be pinched with either, the smalness of his statute will lessen his goodness, and his weak-

ness make useless his hardness.

The Lammas Foals are commonly known by many obscure feathers out of their own fights, as under their eyes, upon their necks, crests, and under their chaps. To conclude, it is not good to put the Horse to the Mares

at all.

Non

If y

In pri

#### BREEDER.

at all, till you find some ready, ( speaking of a general putting together) for so the Horse loseth his strength unfruitfully, and she gets nothing but chafing and mischiefs.

Known

eir orn

ir necks,

onclude,

he Mares

To know when your Mares are ready (if it be in a wild Stud ) observe their chasing and galloping up and down morning and evening, and their inconstancy of abiding in any one place, especially throwing their Noses to the North and South, the lifting up of their tayls, riding on one anothers backs, wooding one another, oft pilling, or opening of their shares and closing them again, all are figns of Lust: If you will make a more particular tryal, then prove them with some stoned Tit or Jade.

#### How to put them together.

When your Mares are ready, the question is how they shall be put together, whether abroad at random for fundry weeks, or at home

in private for a night or two?

If abroad, let your fence be good, your food sweet, and your shelter sufficient. If in the house, then in some empty Barn or spacious place, which may be free from danger of Posts or other occasion of rushes: let

B4

let them remain from Sun-set till Sun-rise, and

lea

ren

at h

Blog

knic ;

Or in

that p Walnu

two nights are sufficient.

Now there is a third manner of covering, and I prefer it for the best, because it keeps the Stallion longer in ability, and ferves the Mare with a great deal more certainty. And that is, first to be sure to have them both at one diet, as the Mare at Grass, and the Horse at Soil; then finding the Mare (by tryal) ready, put them together into some closewalled Paddock, where there is store of sweet Grass and sweet Water, just upon the going down of the Sun, and as near as you can observe, either three dayes after the Change, or three dayes before the Full of the Moon, and let them remain close together two whole nights and one day, and take the Horse from her at Sun-rise.

#### How many Mares for one Horse.

If you cover abroad (as I spake before) at random, an Horse may well serve twelve Mares, if you expect no other service of him. If you cover in the house, where he hath extraordinary keeping, and little chasing, he will satisfie sisteen. But if you cover in the Paddock, then I have known an high spirited Horse for one year, serve to keep you Mares in an indifferent estate of body; for too much fatness

fatnels hinders Conception, and too much leannels abates Lust.

VIIIS

#### Ordering after Covering.

After your Mares are covered, keep them as much as you can from diffurbance, especially for a month after covering, and a month before quickning, yet if necessity compel, you may give them moderate exercise, either in Journeying or otherwise: yet remember, if you keep the Mare in the house at hard meat, she will spring early and much: and sudden cold after, is dangerous for imborsement. Also remember, that a Mare at her first quickning, is like a Fruit-tree, whose Blossomes at the first appearance are tender, and easily destroyed with every shake of Wind, or nip of Frost; but after they are knit and fixt, they are hardly beaten down with cudgels.

## To belp Mares in Foaling.

If any of your Mares be hard of Foaling, or in danger in Foaling, then either hold her Nostrils so that she cannot draw Wind: or if that prevail not, then take the quantity of a Walnut (or better) of Madder, and dissolve it in a Pint of old Ale, and being warm give it the

the Mare. If both fail, then take the help of

some understanding Midwise.

Now if after her foaling she do not cleanse or avoid her Secundine, then boyl two or three handfuls of Fennel in running Water, and take half a Pint thereof, and as much Malmsie, with a fourth part of Sallet-oyl, and mixing them together, give it the Mare lukewarm into her Nostrils, then hold them close a little space after it: otherwise for want of this give her green forrage, that is, either green Wheat or Rye, (but Rye is best) and they are as effectual.

time,

Th

new f

doub

affright

leaping

the way

Wajer

(Ontrary

By no means let the Mare eat her cleanfing (which many will covet) for it is unwholsom,

and an hindrance to her milk.

## How long Foals to run with their Dams.

Let Foals run with their Dams (if you have good accommodation for them) a full year at the least; or if they be choice and principal bred Foals, then two years, if possibly you can: For the going over the Mare will be no loss, in comparison of the excellency to which the Foal will attain by such sufference. But if you want good accommodation, then Wean at seven months, but be sure to keep them lustily; for what they lose in the first year, they will hardly gain in three

three following. And at the Weaning give them Saven and Butter for divers mornings, or the Worm or Gargal will hazard to deftroy them. Befides, have an eye to the Strangle, for it is apt to aflay them, and not taken in time, will prove mortal.

The first Winter, spare neither Hay nor Corn, that is, Oats in the Chaff or in the Sheaf; the chaffing of Wheat, Barley, or Rye, and indeed any Offal that comes from any

Grain whatfoever.

ach

ke-

gain ill these three

#### To know a true Shape, Spirit, and Height:

The same shape which a Foal carries at a full month old, he will carry at six years old if he be not abused in after-keeping; and as

the good shape, so the defects also.

A large Shin-bone that is long, from the Knee to the Pastern in a Foal, shewes a tall Horse. Look what space there is in a Foal new foaled, between his Knee and Withers, double that will be his Height when he is a compleat Horse.

Foals that are of stirring spirits, free from affrights, wanton of disposition, active in leaping, running and chasing, ever leading the way and striving for mastery, these alwayes prove excellent metal'd Horses, the

contrary Jades.

#### To know goodnes.

There is a Rule, and it is a good one, That an Horses ability, and continuance in goodness, is known by his Hooss: For if they be strong, smooth, hard, deep, tough, uprightstanding, and hollow, that Horse cannot be evil. For they are the soundation of his building, and lend fortitude to all the rest. If they be otherwise, he cannot be good or lasting. Whence it comes to pass, that no Horse naturally hath so good Hooss as the Barbary; and it is indeed the only character by which to know him from all other Horses.

#### Weaning of Foals.

Wean your ordinary Foals from their Dams at the end of seven months at the utmost; the better, at a year, two, or more. And observing so to divide them, that neither the Foals nor the Dams may be within the hearing of one anothers call. For which cause it is thought sit to house the Foals for two or three nights, (on the mornings where of you shall give the Saven and Butter before spoken of) that they may forget the Dams; and send the Mares to their Pasture. Also, observe to keep them as high as is possible the second

As You m

and w Colts a year the do

od-

be

htbe

ild-

they ing.

Maa

177 ;

their

e ur

i ner

ls for

here-

Dams;

Allo,

feculd

As you separate Foals from the Dams, so you must divide the Mare-Coalts; for it is certain, that amongst these high-bred spirits, and with this losty and sull feeding, the Horse-Colts will cover to cover the Mare-Colts at a year, as I have seen by experience, and it is the destruction of both. Again, if you have such store of grounds, you may separate one years breed from another. This is the safest course, because of continual samiliarity for change of quality.

#### Gelding of Colts.

If you intend to Geld any of your Colts, the only best time, and which maketh the finest Geldings, is at nine dayes old, or as soon as you perceive the stones to fall; for then is the least danger, and it maketh finest Crests. The time of the Moon to Geld in, is in the Wane, the Sign in Aries or Virgo; the time of the year in general, is the Spring or Fall: and although the earlier you Geld, the better and safer; yet notwithstanding you may safely Geld at any time, or any age, even from Foal

old age; and although the elder, the greater swelling, yet more exercise and more chasing will asswage it:

#### Taming of Colts.

Touching the Taming of Colts, or making them domestick or familiar, you shall begin even from the first weaning; and so Winter after Winter (in the House) use them to familiar actions, as rubbing, clawing, haltering, leading to Water, taking up of his seet, knocking his hoofs, and the like.

#### To Break Colts.

The best time to break Colts to the Saddle, according to the antient opinion and general custom of men (and which brings them sooness to the use and service of the Owner, and therein supposed to be most profitable) is at three years old and the advantage, or four at the utmost. But say I, he that will stay and see his Horse sully five, shall be sure to have an Horse of longer continuance, less subject to disease and infirmity, and one that (but by death) will hardly come to the knowledge of Tyring.

All the actions about a Colt in his nonage, or an Horse to break at elder age, must be done first beg

mult

one first with warning, next constantly and aliantly, not searfully or doubtfully: The irst begette h obedience, the other rebellion.

#### Coiling of the Stud.

Touching the Coiling of the Stud, or makeng of special Elections, I need not spend nuch Ink, because the Owner best knows which are best bred, and his eyes can tell him where is the best shape and soundness. I only dvise him by no means to make too early Coiling: for some Horses will shew their best hape at two and three years old, and lose it t four; others not till five, nay fix, but then eep it ever. Some will do their best dayes rork at fix and seven years old, others not Il eight or nine. But be the time when it vill, let him preserve for his own use the best. ne most comely, and most sound. Those hich are defective, I mean such as bring inrable Deformities, gross Sorrances, as Spaens, Ringbones, imperfect Eyes, or the like, t that shew palpable bastardy, send them vay to the market.

When you find any of your Mares grow to barrenness, unnaturalness, or disease, away with them, and change them.

For

For all, though I could prescribe you Remedies, yet they are not worthy your use mor will I rue your loss: Therefore let suc Mares go, for their profit is past, and they ar useles.

Thus much touching Breeding.

THE

#### THE

# RIDER!

#### Observations in Riding.

T is not intended that in these few Observations, or short Touches, I should discover the whole Art of Riding: it neither fits the brevity of the Work, nor

its with my first promise in the Title.

He that looks for fuch largeness of disourse, I refer him to my greater Volumns; I this only is to be found things new, things retain, set down in way of Principles, or inllible Rules, to conduct a man the easiest ay to some persection.

#### Times to bandle Colts.

To begin then with the first Taming, or aking gentle of a Colt (as I shewed you the Observations for Breeding) you must gin the first Winter after his foaling, and so ntinue every Winter till he come to the Saddle,

Saddle, which time I have also set down in the same place; and then there is no fear of evil qualities. But if a Colt of contrary education come to your hands, and must be handled, then apply him with all gentleness, and may do nothing about him suddenly, roughly, or fearfully; yet with that awe of your voice, fight your rod, and other terror, make him know hell you are his Master when he rebelleth. And when when you begin to do any thing about him fait (of what nature soever ) never leave it; only and take leasure, and rather win it by gentleness, that than cruelty: Forget not to give the Horse W reward, when he gives content; and by no hind means punish, till you are sure he knows his too his error; for before you give him understanding, it is impossible he should obey.

Neither doth this Taming of a Colt confift his fil in the house only, but in the field also; where much with a Cavezan, or Chain, and a long Rein, but his with an Iron Turnel under his Chaps, you him shall make him trot large Rings about you had readily on both hands, and change at your pleasure as you shall turn him. And then to your cherishings, corrections, and all manner of handlings, which before you had used in When

the house.

When is much

1

#### When to Saddle.

han-When your Horse is thus made gentle, you may then offer him the Saddle: but with that y or deliberate carefulnels, that he may not take afvoice, fright or dislike thereat; suffering him to know smell at it, to be rubbed with it, and as it were And to feel it; and not to feel it; then in the end to thin lix it on, and girt it fast: and at what part only and motion soever he seems most coy, with lenels, hat make him most familiar.

Horle When he will endure the Saddle, then trot by no lim abroad with it, and make him (as before) rot his Rings on both hands about you, clap fland he Saddle as it flands on his back, shake it. ang and sway upon it, dangle the stirrops by confi is fides, rub them on his fides, and make when such of him, and familiar with all things a-Rein out him, as the straining of the Crooper, s, you stning and loofning the Gyrths, and taking out you p, or letting out of the Stirops.

#### Of Moutbing.

at you

manna

d used

When he will trot with the Saddle obeditly, then you shall wash a Trench of a full outh, and somewhat worn, and put it into smouth, and throw the Reins over the re part of the Saddle, Bolsters and all, and

make them of the length, that the Horse may have a full seeling of the Trench, and a sense to play on the same: Then put on a Martingal, and fix it from the Gyrths to the Chaulband of the Cavezan; but at that length, that the Horse may not find sault, unless he disor-

derly throw up his head.

Then take a broad piece of Leather, and put it about the Horses neck, and make the two ends saft by platting, or otherwise, at the Withers and mid-part before his Weisand, about two handfuls below his Trople: betwist his Neck and the Leather let the Martingal pass; so that when at any time he shall offer to duck or throw down his head, the Cavezan being place upon the tender grissel of his Nose, may cor. and punish him. By which means he shall not only lose that soul quality of winning the head, and thrusting it between his legs; but also gain the way of raising up his neck, bringing down his head, and safhioning himself to an absolute Rein.

The Horse thus accounted, trot him abroad led, as before shewed, and chase him about you or hos both hands. And if you find either the Rein wood of the Trench or Martingal to grow slack, we then straiten them; for where there is no fee.

ling, there is no vertue.

#### Of Backing.

thithat When you have exercised your Horse thus divers mornings, noons, or evenings, and find him both tractable, ready, and obedient, you may then take him into some new ploughed ground (the lighter the better) and having athe chased him a little on both hands; and seeing felland all your tackle firm, strong, and good, and build every thing in its true and due place, you may then ( having one to stay his head, and all de Bovern the Chafing-Rein) take his Back, yet average not suddenly, but by degrees, and with divers of he neavings and half-raisings. Which if he endure patiently, then you may take the Reins quality of the Trench into your hands and fettle your elf. But if he shrink or dislike, then forbear y of rai o mount, and chase him about you again, hen offer to mount; and thus do till hereead, and eive you willingly. Then when you are fetmatro ed, have received your stirrops, and cherish'd im, putting your toes forward; let him that tayes his head, lead him forward half a dozen aces, then both cherish him; then lead him ow flas orward a dozen paces, then rest and cherish. nd shake and move your self in the Saddle: hen let him that stayes his head, remove his and a little from the Cavezan; and as you hrust forward your toes, so let him also

move him forward with his Rein, till you have made the Horse apprehend your own motions of body and foot, (which must go equally together, and with spirit also) so that he will go forward without the other assistance, and stay upon the restraint of your own hand, and not the stay of the Cavezan: then you shall cherish him, and give him grass or bread to eat; alight from his back; then mount and unmount twice or thrice together, ever mixing them with cherishings. Thus exercise him till you have made him perfect in going forward, and standing still at your pleasure.

#### Helps at first Backing.

When this is effected, you may lay by the long Rein, and the Band about the neck, and only use the Trenches, the Cavezan, and the Martingal; and instead of leading in hand, let a Groom, on another Horse, lead the way before you into the field; where you shall not strive to teach him any other lesson, than to go strait forthright forward, and to stand still when you please: which will be effected in a few mornings, by trotting him forward a mile or two after another Horse, and so bring him home sometimes after the Horse, sometimes equally with, and sometimes before,

fo that he may fix upon no certainty, but you own pleasure. And in all this labour, you must have a special regard to the well-carriage of his head and neck; and as the Martingal allacketh, so to straiten it.

#### What Lessons for what Horse.

uwo 11

then

then When this work is finished, you may then gether, proceed to teach your Horse those Lessons This which are fit for his practice, and the purpose perfect for which you intend him. As if it be for Your Hunting, Running, Travel, Hackney, or the like; then the chiefest things you are to apply your felf unto, are to preserve a good mouth, to Trot freely and comely, to Amble surely and easily, to Gallop strongly and swiftly, to by the obey the hand in stopping gently, and retiring d, and willingly, and to turn on either hand readily and nimbly. To all which I will give you nhand, lights in their several places. But if you intheway tend him for the great Saddle, or the use of the wars, then although the Lessons be the same, yet they are to be taught and done in o fund a more punctual manner, and ask more nice efficiel and artificial demonstrations. So that if an rward: Horse can be brought to the best, the easier bing nust needs follow with little industry. And t is a Rule in Horsemanship, that no Lesson below which belongs to the Wars can be hurtful, or do

do injury to any Horse whatsoever that is kept for any other purpose. Whence it cometh, that every Horse for the Wars may be trained for a Runner, or Hunter at pleasure: But every Runner or Hunter will not serve for the Wars: And every Horseman that can make an Horse for the Wars, may be a Jocky when he pleases; but no Jocky (that I know) can make an Horse for the Wars. Therefore I will run a middle way, and suit my Lessons for both purposes.

#### Helps and Corrections.

Before you teach your Horse any lesson, you must know there are seven helps to advantage him in his lessons, to punish him for faults gotten in his lessons; and they be the Voice, the Rod, the Bit or Snasse, the Calves of the Legs, the Stirrop, Spur, and the Ground.

Voice.

The Voice is an help, when it is sweet and accompanied with cherishings; and it is a correction, when it is rough or terrible, and accompanied with strokes or threatnings.

Rod.

The Rod is an help in the shaking, and a correction in the striking.

Bit

kept

every

to ad-

be the

fround.

and ac-

#### Bit or Snaffle.

The Bit is an help in its sweetness, the Snaffle in its smoothness; and they are cor-Hole rections, the one in its hardness, the other in eales; lits roughness, and both in flatness and square-Horle ness.

#### Calves of the Legs.

The Calves of the Legs are helps when you lay them gently to the Horses sides; and corrections when you strike them hard, because leston, they give warning that the Spur follows.

#### Stirrop and Stirrop-leathers.

The Stirrop and Stirrop-leathers are helps when you thrust them forward in a quick motion, and stir up in the Horse spirit and agility. But when you strike it against the hinder pettand part of the shoulder, it is a correction, and aisator wakens memory.

The Spur is an help when it is gently delivered in any motion that asks quickness and agility, whether on the ground, or above the ground; and a correction, when it is Ariken hard into the sides, upon any sloth or other fault committed.

The

#### The Grounds

Lastly, The Ground is an help, when it is plain and smooth, and not painful to tread on; and it is a correction, when it is rough, deep, and uneven, for the amendment of any vice conceived.

## Of large Rings.

When your Horse will receive you to and from his back gently, trot forward willingly. and stand still obediently. Then, intending him for the Wars, or other purpose, ( for these Lessons serve all occasions) you shall in some gravelly or landy place, where his footsteps may be discerned, labour him within the large Ring; that is, at least fifty paces in compass; and having trod it about three or four times on the right hand, rest and cherish, then taking compais, change your hand, and do as much on the left hand, then rest and cherish; then change the hand again, and do as much on the right hand, ever observing upon every stop to make him retire and go back a step or two.

Thus labour the Horse till you have him so perfect, that he will trot his Ring on which hand you please; changing within the Ring

ending

, ( for

here his

nd, and

rest and

and go

Now here is to be cleared a Paradox held by many of our Horsemen, which is that the exercise of Rings is not good for Running-Horses, because it raises up his fore-feet, and makes him gallop painfully, and so an hindrance untospeed. But if they consider that this habit (if it be taken) is soon broken either by the Horsemans hand or discretion, who hath power to make him move as he pleafeth. paces in Or if they will truly look into the benefit of hree or the Ring it felf, they shall find it is the only means to bring an Horse to the true use of his feet, and the nimble carriage of them in all advantages. For every Runner of Horses ain, and will allow, that for an Horse ( in his course ) o lead with his right foot, is most proper; and when at any time he breaks or alters it, t must be disadvantage, because (not well. ve him so requainted to lead with the other ) he cannot on which pandle it so nimbly. Now at his first backthe Ring

ling

ing, by the use of his Ring and change of hands, he will become so expert and coming with both, that howsoever mischance shall alter his stroke, yet shall his speed and nimbleness keep one and the same goodness.

#### Of Stopping.

When you come to the place of stop, or would stop; by a sudden drawing in of your Bridle hand somewhat hard and sharp, make him stop close, firm and strait in an even line: and if he err in any thing, put him to it again, and leave not till you have made him understand his error, and amend it.

# Advancing.

Now if you do accompany this Stop with an Advancement a little from the ground, it will be more gallant, and may be done by laying the Calves of your Legs to his fides, and shaking your Rod over him as he stops.

If it chance at first he understand you not, yet by continuance and labouring him therein, he will soon attain unto it, especially if you forget not to cherish him when he gives the

least shew to apprehend you. Is to say the

After stopping and advancing, make him Retire, as before shewed. And this motion of Retiring, you must both cherish and increase, making it so familiar with him, that no lesson may be more perfect: Neither must he retire in a consuled or disorderly manner, but with a brave Rein, a constant head, and a direct line: Neither must he draw or sweep his legs one after another; but take them clean, nimbly, and loftily, as when he trotted forward.

#### Of Bitting.

When your Horse is come to persection in these lessons, and hath his head firmly settled, his rein constant, and his mouth sweetned, you may then (if you intend him for the Wars) take away his Trench and Martingal, and only use the Cavezan of sour or three pieces; that is, a Joint or no Joint in the midst, and to that Joint a strong Ring, and a Joint of each side with Rings before the Joints, to which you shall put several Reins to use, either at the Post, or otherwise. Into his mouth you shall put a smooth sweet Canon-Bit, with a French Cheek, suitable to the proportion

of the Horse neck; knowing that the long Cheek raises up the head, and the short pulls it down. And with these you shall exercise the Horse in all the Lessons before taught, till he be persect in them, without either disorder or amazement.

#### Of Grait Turns and Turnings.

When he is thus fetled upon his Bit, then you shall teach him to turn roundly and readily in the straiter Rings: and of these there are divers kinds, and divers methods and manners how to teach them. All which I will omit, and only fix upon two manner of strait Turns, as the perfection from whence all Turnings are derived.

The one is, When the Horse keepeth his hinder parts inward, and close to the Post or Center, and so cometh about and makes his circumference with his fore-parts, following

an enemy that a little avoids him.

And the other is, When he keeps his Face fixt on the Post or Center, and comes about and makes his circumference with his hinder parts, opposing face to face with his enemy.

## The first strait Turn.

For the first of these strait Turns, it is thus to be taught. You

ercife

, then

nd rea-

f Arait

es about

nemy.

You

You shall to the Ring, in the mid-part of the Cavezan, fix a long Rein of two fathom or more; and to the other Rings, two other thorter Reins: then having sadled the Horse. fordet and put on his Bit, bring him to the Post, and put the Reins of the Bit over the forepart of the Saddle, Bolsters and all, and fix them at a constant straitness on the top of the Pomel, lo that the Horse may have a feeling both of the Bit and Curb. Then, if you will have him turn to the right hand, take the short Rein on the left fide of the Cavezan, and bringing t under the Fore-bolfter of the Saddle up to ihe Pomel, and there fix it at such a straitness hat the Horse may rather look from, then to he Post on the right side: Then let some Groom or skilful Attendant hold the right ide Rein of the Cavezan at the Post, governng the fore-parts of his body to come abour it large: Then your felf taking the long Rein nto your hand, and keeping his hinder parts nward, with your rod on his outward shouler, and sometimes on his outward thigh, nake him move about the Post, keeping his linder parts as a center, and making his fores hinder arts move in a larger circumference. Thus ou shall exercise him a pretty space on one and, till he grow to some perfectness and unerstanding of your Will. Then changing ne Reins of the Cavezan, make him do the like

like to the other hand. And thus apply him divers mornings, mingling cherithing with his exercife, according to his defervings, till you have brought him to that readiness, that he will, upon the moving of your Rod, couch his hinder parts in towards the Post; and lapping the outward fore-leg over the inward, trot about the Post swiftly, distinctly, and in as strait compass as you can defire, or is convenient for the motion of the Horse. And from trotting, you may bring him to flying or wheeling about with that swiftness, that both the fore-legs rising and moving together, the hinder-parts may follow in one and the same instant.

When you have made your Horse thus perfect in your hand, you shall then mount his back; and making some other skilful Groom, or Attendant, govern the long Rein, and another the short, by the motion of your hand upon the Bit, and lest Rein of the Cavezan, keeping the Horses head from the Post; and by the help of the calve of your leg laid to his side, and your Rod turned to his outwardthigh to keep his hinder parts into the Post, labour and exercise him till you have brought him to that persection which your self desire; Then take away the long Rein, and only exercise him with the help of the short Rein of the Cavezan, and no other.

After, take both the Reins of the Cavezan into your hands, and exercise him from the Post; making him as ready in any place where you please to ride him, as he was at the Post. lap.

#### The other frait Turn.

Now for the other strait flying Turn, which s, to keep his face fixt on the Post as on his And Enemy, and to move about only with his inder parts; you shall take the same helps f the long Rein, and the short Reins of the the lavezan, and govern them as before shewed ; and nly you shall not give the short Rein to the oftward so much liberty as before, but keep species Head closer to the Post, and sollowing his nder parts with the long Rein, by the help your Rod make him bring his hinder parts and und about the Post: And observe, that as hand fore he did lap one fore-leg over another, mow he must lap the hinder-legs one over ; and other.

In this lesson exercise him as in the former: nen (after a perfectness) mount his back, e Polit d labour him as before shewed. Then lastleaving the Post and all other helps, only define; oly him in such open and free places as you wester ill think convenient: For upon the finishof this work, your Horse is made comat, and can perform all things that can be

required either for service in the Wars, for the High-way, or any other galloping pleasure: which is the end of mine aim, and the utmost journy I will take in these observations. Only for a conclusion, I will bequeath you one or two pretty Secrets.

and

and th

gentle

and

bring I And fo

iein,

There

#### How to belp an ill Rein, and cure a Runaway Fade.

There are many Horses so evil beholden to Nature, for giving them short untoward Necks, and worse set on Heads; and so little beholden to Art to endeavour to amend them, that many good Horses are left cureless of these two gross unsufferable faults; which are either a deformed carriage of the Head I ke a Pig on a broach, or else a furious runing away, got by a spoil'd mouth, or an evil habit.

The Help.

To Help any, or both of these: If it be a young Horfe, at the first Riding, then to his Trench; If of old standing, then to his with Snassle, (for I speak not of the Bit.) Put a the pair of Reins, half as long again as any ordi- Non nary Reins, and Loops to fasten and unfasten at the eye of the Snaffle, as other Reins have. Now when you see that the Horse will not the yield

yield to your hand, but the more you draw, the more he thrusts out his Nose, or the more re: violently he runs away; then undo the buttons of the Reins from the eye of the Snattle, uly and drawing them through the eyes, bring e or them to the buckles of the foremost Gyrth, and there button them fast: Then riding the Horse in that manner, labour him with the gentle motions of your hand, coming and going by degrees; and fometimes accombanied with your Spur, to gather up his body. and to feel your command, and affuredly n a small expence of time, he will yield and ring his Head where you would place it. hem, els o and for Running away, if you draw one lein, you turn him about in despight of all ary; and if you draw both, you break his haps, or bring them to his bosom: In the s run nd, finding himself not able to resist, he will e willing to obey.

#### Another help for inconstant Carriage.

There is another foul error in many Horses, hich these Reins also cure; as this, When our Horse is either so Wythie Cragg'd (as e Northern man calls it) or so Loose and afteady-Necked, that which way soever you aw your hand, his head and neck will solw it, sometimes beating against your knees,

to la

ny ord

on the

sometimes dashing against your bosom, nay, sometimes knocking you in the face; and indeed, generally so loose and incertain, that a man cannot fay at any time, he hath certain or steady hold of him. A vice wonderful incident to Running-Horses, especially the hor furious ones. In this case you shall take their long Reins; and as before you drew them to the buckles of the Gyrths, so now Martingalwife draw them from the eyes of the Snaffle, betwixt his fore-legs to the Gyrths, and there fasten them. Thus ride him with a constant hand, firm and somewhat hard, correcting him both with the Spurs and Rod, and sometimes with sharp twitches in his mouth when he errs; and with a few weeks labour, his Head will come to a constant carriage, provided that you labour him as well upon his Gallop as his Trot, and leave him not till you the find him fully reclaimed.

How any Lady or Gentlewoman shall sour her Horse as well as any Man, yet unperceived.

Take a strong Whale-bone, that is, at one one end of one side round, of the other flat, and public of a pretty thickness; then Rush grown and fmall to the other end. All round to the flat end glue a piece of Cord, about an inch W,

110

t a

in-

hot

n to

laty

1711 2

and an half longer, being to the upper end of the bone as thin as may be; but from the end made Wedge-like, thicker and thicker, to half an inch thickness or more, as you shall find occasion, being a thing only to bear the bone from the Horses sides. Then you shall cause to be made of Iron a Neck of a Spur, an handful or more long, having at the one end fet a sharp Rowel as big as a great French Rowel, gal. affle, but not set as a mans Rowel, but cross-wise, here the pricks looking to the Horses sides; the other end of this Neck shall be rough, and with a Shoomakers Thred made fast to the small zound end of the Whalebone. Then make fast the great end of the Whalebone with Leaside-faddle-tree, and look that the Spur stand opposite to the Spurring place of the Horses on his sides. Now as you do this side, so do the oll you ther fide also.

Then take a strong Ribbon, and fasten it with a loop to the Spur neck on the near-fide, ind draw it under the Horses belly upon the ar-fide: Then fasten another to the Spur on the far-side, and fasten both ends at an ven length under the Pomel of the Saddle, ret so as she may command it with her Bridle-Rein.

Now when she will Spur on the left side which we call the near-side ) let her draw

RIDER.

38 the Ribbon on the far fide (which is the right fide) and when she will spur on the right side, let her draw her Ribbon on the near side; when she will spur both sides at once, let her draw both the Ribbons equally.

Thus much for the Office of the Rider.

Work fron by m

farry i Denly

# OFFICE OF THE FEEDER.

An Introduction to the Work, touching the limitation of time, for preparing the Running-Horse.

Will not dispute the several opinions of Men in this Kingdom, touching the keeping of the Running-Horse, because I know many are idle and frivolous; some incertain, and a few in the right way. Only in this work I would clear one paradox, which is strongly maintained, and infinitely pursued by many of our best Professor; and that is the limitation or length of time, for the preparing or making ready of an Horse for a Match, or great Wager.

HE

There be divers, nay, some which I know carry the Goddesses on their backs, that as-firm, An Horse which is exceeding fat, soul, newly taken from grass, soil, or lofty, liberal

D 4

and unbounded feeding, cannot be brought to the performance of his best labour under fix Months, five is too little, and four an act of impossibility. By which they rob their Noble Master of half a years pleasure, thrust upon him a tyring charge to make the sport loathsome, and get nothing but a cloak for ignorance, and a few falle-got Crowns that melt as they are possessed.

Yet as Heretiques cite Scriptures, so these find Reasons to defend want of Knowledge.

As, the danger of too early exercise; the offence of greafe fuddenly broken; the moving of evil humours too hastily, which leads to mortal fickness.

And the moderation or helping of all these by a flow proceeding, or bringing of the horse into order by degrees and time, or (as I may fay) by an ignorant sufferance.

These Reasons I know have the shew of a good ground; for too early exercise is dan-

gerous, but not if free from violence.

To break grease too suddenly, is an offence unsufferable, for it puts both limbs and life in hazard; but not if purged away by whol-

some Scourings.

The hafty stirring up of humours in a body, where they superabound, and are generally dispersed, and not settled, cannot chuse but breed fickness; but not where discretion and

But reply they, No Scouring is to be alfent wed, for they are Physical; they force naire, and fo hurt nature; they make fickness, nd so impair health: And that indeed noing is comparable to the length of time, betuse Nature worketh every thing her self: nd though she be longer, yet she hath less inger.

I confess that Sybbesause Scourings which But are stuft with poylonous ingredients, cannot w, T chuse but bring forth infirmity: but whole-more fome Scourings, that are composed of bene- muur ficial and nourishing Simples, neither occasi-lingue on fickness, nor any manner of infirmity, but which bring away greafe and all foulness, in that fored kindly and abundant fort, that one week shall This effect more than two months of dilatory and thusan doubtful forbearance.

Th

I call it dilatory and doubtful, because no other Man (in this lingring course) can certainly areful tell which way the greafe and other foulness Argun will avoid, as whether into his ordour (which laugh) is the fafest) into sweat (which is hazardous) many into his limbs (which is mischievous) or re- even by main and putrifie in his body (which is mortally dangerous?) Since the issue of any, or tring all these fall out according to the strength and Nay, estate of the Horses body, and the diligence of the Feeder: And if either the one fail in thing power, or the other in care, farewel Horse for sour noff ber

All this Envy cannot chuse but confess; only history they have one broken Crutch to support them, wanter which is, They know no Scouring, therefore

they will allow of no Scouring.

they will allow of no Scouring.

Against Barbarism I will not dispute, only I appeal to Art or Discretion, whether Purgation or Sufferance, when Nature is offended, But be the better doers.

But they reply, by a figure called Absurdiannot ty, That whatloever is given to any Horse more than his natural food, and which he will maturally, and of his own accord with all wiloccin-linguels receive, is both unproper and unwholesome; and therefore he ought not to be forced with any thing against his appetite.

This I have heard them fay, and to this I

want thus answer:

els; onl ort then

thereful

ute, on

er Purg

ofichie

The natural food of Man is bread only, all aule of other things (according to the Philosopher) are superfluous, and so to be aboided. At this found Argument both Humanity and Divinity which aughs: For, other helps, as Physick, divers neats, and divers means ordained for both, or even by the power of the Almighty himself. ells the contemners hereof, how grossly they

any, or in this foolish opinion.

Nay, allow them a little shadow of truth. hat things most natural, are most beneficial. hen it must follow, that Grass, or Hay (which Horal s but withered Grass) is most natural, and so 10st beneficial. Now Grass 18 Physical, for n it is contained all manner of Simples, of all nanner of mixtures, as hot, cold, moist, dry; f all qualities, all quantities. So that what. pever I give (which is good) is but that which he hath formerly gathered out of his wn nature, only with this difference, that that he gathereth is in a confused manner, clapping

clapping contraries together so abundantly, that we are not able to judge where the predominant quality lyeth; and that which we compound, is so governed by art and reason, that we know how it should work, and we expect the event, if it be not crost by some

greater disafter.

But will they bind themselves to keep the Running-Horse only with Grass, or Hay? They know then, the end of their labour will be loss. Nay, they will allow Corn, nay, divers Corns, some nourishing and loosing, as Oats and Rye; Some affringent and binding, as Beans; and some fatting, and breeding both blood and spirit, as Wheat: Nay, they will allow Bread, nay, Bread of divers compositions, and divers mixtures, some before heat, and some after, some quick of discretion and some slow. And if this be not as Physical as any Scouring a good Horseman gives, I repent me to him that shall read the Bills.

Nay, these contemners of Scourings will allow an Egg, nay, an Egg mixt with other Ingredients: And for Butter and Garlick, they will use it, though it be never so sulfom: the reason is, because their knowledge can arise to no higher a stair in Physick; and authorised Ignorance will ever wage battel with the best Understanding: like soolish Gallants on St. Georges day, who neither

k; and e batth

toolul neith

There are another fort of Feeders, which in a contrary extream run beyond these into the mischief; and those are they which over-scour lay their Horses, and are never at peace but when they are giving Potions (which they call scourings) fometimes without cause, alwayes without order, bringing upon an Horse such intolerable weakness, that he is not able to pereding form any violent labour.

this From this too little, and too much, I would have our Feeder to gather a mean; that is, befor First to look that his Simples be wholesome: then to the occasion, that he besure there is hyla foulness: and lastly, to the estate of body, that he may rather augment than decrease vigor.

So shall his work be prosperous, and his

actions without controulment.

To conclude, Two months I allow for preh otha paration, and according to that time have laid my Directions. Mine humble fuit is, out of a fincere opinion to Truth and Justice, so to allow or disallow, to refrain or imitate.

The first ordering of the Running-Horse, according to the several estates of their

Bodies.

Me may

Now; bolies,

This office of the Feeder, albeit in general it belongs to all Horsemen, yet in particular it is most appropriate to the Feeder of the Running-Horse; because other general Horses have a general way of feeding, these an artificial and prescript form, full of curiosity and circumspection, from which, whosever errs, he shall sooner bring his Horse to destruction, than perfection.

Therefore when an Horse is matcht, or to be matcht for a Running Course, you are principally to regard the estate of body in which the Horse is at the time of his matching. And this estate of body, I divide into three several

kinds.

The first is, If he be very fat, foul, and either taken from grass or soil.

The second, If he be extream lean and poor, either through over-riding, disorder, or other infirmity.

And the third, If he be in good and well-liking estate, having had good usage and mo-

derate exercise.

If he be in the first estate of body, you shall take longer time for his feed, as two months

months at the least : for he will ask much laour in Airing, great carefulness in Heating, and discretion in Scouring, and rather a

If he be in the second estate of body (which s poor) then you shall also take a longer ime, as you may, yet you need not so much is in the former; both because Grass cannot be soon to be nuch hurt, and Exercise may go hand in hand lorles

with Feeding.

and This Horse would have moderate and ten, theerful airing, as not before or after Sun, rather to increase appetite than harden flesh; gentle heats, more to preserve wind then melt or to lut; and a bountiful hand (but far from cloy-

printing) in feeding.

25 1113 madi

The be in the third estate of body (which And s a mean betwixt the other extreams,) then a ferent nonth or fix weeks, or a fortnight, or less, nay be time sufficient to diet him for his inder March. Now as this estate participates with oth the former, so it would borrow from hem a share in all their orderings; that is, to nother too early, nor too late in airings; abourious, but not painful in heavings, nouishing in scouring, and constant in a modeand ate way of feeding.

Now as you regard these general estates of y, poliodies, so you must have an eye to certain articular estates of bodies,: As if an Horse be

fat and foul, yet of a free and spending nature, apt quickly to consume and lose his flesh; this Horse must not have so strict an hand, neither can he endure so violent exercise as he that is of an hard and kettry disposition, and will feed and be fat upon all meats and all exercises.

Again, If your Horse be in extream poverty, through differed or misusage, yet is by nature very hard, and apt both soon to recover his stesh, and long to hold it: Then over this Horse you shall by no means hold so liberal an hand, not forbear that exercise which is of a tender nature, a weak stomach, and a free spirit; oxided alwayes, you have regard to his lime, and the impersection of lameness.

To you fee how to look into the estates of Horses bodies, and what time to take for your matchings, I will now descend to their several orderings and dyeting. And because in the fat Horse is contained both the lean Horse, and Horse in reasonable estate of body; I will in him shew all the secrets and observations which are to be imployed in the feeding of all three, without any omission or reservation whatsoever: For truth, Sir, I have vowed unto you, and truth I will present you.

The first Fortnights feeding of an Horse for Match, that is fat, foul, and either newly taken from Graß or Soil.

If you Match an Horse that is far and foul. either by running at Grass, or standing at soil, or any other means of rest, or too nigh feeding; you shall ( after his body is emptied, and the Grass avoided, which will be three or four dayes ) for the first fortnight at the least, rise early in the morning before lay, or at the spring of day, according to the ime of the year; and having put on his bridle vasht in Beer, and tyed him up to the Rack, ake away his dung and other foulness of the stable; then dress him well, as in the Office effatt of the Keeper

When that work is finished, take a fair arge Body-cloth of thick Houswifes Kersie if it be in Winter) or of Cotton or other light tuff (if it be in Summer) and fold it round bout the Horses body; then clap on the sadle, and gird the foremost Gyrth pretty strait, ut the other somewhat slack, and wisp it on ach fide his heart, that both the Gyrths may

e of equal straitness.

Then put before his breast a Breast-cloth, oth his shoulders; Then take a little Beer into into your mouth, and squirt it into the Horses mouth, and so draw him out of the Stable, and take his back, leaving a Groom behind you to trim up your Stable, to carry out dung and to toss up the litter: For, you are to understand that the Horse must stand upon good store of fresh litter continually both night and day, and it should be ever Wheat-straw (if possible) or Oat-straw (if forced by necessity.) As for Barley-straw, and Rye-straw, they are unwholesom and dangerous; the one doth heart-burn, the other causeth scouring.

When you are mounted, rack the Horse foot-pace ( for you must neither Amble nor Trot, for they hurt speed ) at least a mile or two, or more upon smooth and sound ground, and (as near as you can) to the steepest hills you can find; there Gallop him gently up those hills, and rack or walk him softly down, that he may cool as much one way, as he warmeth another. And when you have thus exercised him a pretty space, and seeing the Sun beginning to rise, or elle risen, rack down either to some fresh River, or clear Pond that is fed by a sweet Spring, and there let him drink at his pleasure. After he hath drunk, bring him calmly out of the water, and fo ride him a little space with all gentleness, and not according to the use of ignorant Grooms,

Grooms; rush him instantly into a Gallop, for that brings with it two mischiefs, either it teaches the Horse to run away with you as soon as he is watered, or else refuse to drink, fearing the violence of his exercise which follows upon it.

Grooms

When you have used him a little calmly, then put him into a gentle Gallop, and exercise him moderately, as you did before; then walk him a little space, after offer him more water: If he drink, then Gallop him again (after calm usage;) if he resule, then Gallop him to occasion thirst. And thus always give him exercise both before and after water.

When he hath drank sufficient, then bring him home gently, without a wet hair, or any

fweat about him.

When you come to the Stable-door, before which your Groom shall ever throw all his foul litter continually; there alight, and by whistling and stretching the Horse upon the straw, and raising up the straw under him, see if you can make him piss, which if at first he do not, yet with a little custom he will soon be brought unto it, and it is an wholesom action both for the Horses health, and the sweet keeping of the Stable.

This done, bring him into his stall, and tye him up to the Rack, then with whisps rub his legs well, then unloose his breast-cloth, and rub his head, neck and breast with a dry cloth; then take off the saddle and hang it by, then his Body-cloth, and rub over all his body and limbs, especially his back where the saddle stood. Then cloath him up, first with a linnen sheet, then over it a good strong Housing-cloth, and above it his woollen Body-cloth, which in the Winter is not amiss to have lin'd with some thin Cotton or Plad, or other woollen stuff; but in the Summer, the Kersie it self is sufficient.

When these are girt about him, stop his Circingle round with reasonable hig soft wisps and thick, for with them he will lye at best ease, because the small hard wisps are ever

hurtful.

After he is cloathed, pick his feet and stop them up with Cow-dung; and then throw into his Rack a little bundle of Hay, so much as an half-penny bottel in a dear Inn, well chosen, dusted, and hard bound together. And this he shall tear out, as he standeth on the bridle.

When he hath stood on his bridle an hour and better, you then shall come to him, and first draw his bridle, rub his head, sace, and nape of the neck with a clean rubber made of new rough hempen cloth; for this is excellent for the head, and dissolveth all gross and filthy humours: Then with a clean cloth make the Manger as clean as may be; and if

he

tho

WOT

if he

give

Quart

Am !

he have scattered any Hay, take it up and throw it back into the Rack. Then you shall take a quart of sweet, dry, old, and clean drest Oats, of which the heaviest are the best, as those which we call Poland-oats, or Cut-oats: For those which are unsweet, breed infirmity; those which are moist, cause swelling in the body; those which are new, breed worms; and they which are half drest, deceive the stormach, and bring the Hosse to ruine.

As for the black Oats, though they are tolerable in the time of necessity, yet they make foul dung, and hinder a mans knowledge in

the state of the Horses body.

This quart of Oats you shall ree and dress wondrous clean in a Sieve, that is much less than a Riddle, and though bigger than a Reeing-sive, such an one as will let a light. Oat go through, but keep a full one from scattering, and so give them to the Horse; and if he eat them with a good stomach, you may give him another, and so let him rest till it be eleven a clock.

Then come to the Stable, and having rubbed his head, neck and face, dress him another quart of Oats (as before) and give it the Horse; then closing up the windows and lights, leave

him till one a clock.

And here you are to understand, That the darker you keep your Horse in your absence,

the better it is, and it will occasion him to lye down and take his rest, when otherwise he would not; and therefore we commonly use to arm the Stables wherein these Horses stand round abour a Lost, and over the Rack with Canvas, both for darkness, warmth, and that no filth may come near the Horse.

At one a clock come to him, and dress him another quart of Oats, and give them as before, after you have rubbed his head and nape of the neck: then putting away his dung, and making the stable clean, give him a knob of Hay, and so leave him till even-

ing.

At evening come to the Stable, and having made all things clean, bridle as in the morning; take off his cloaths, and dress him as

before.

Then cloath, saddle, bring him forth, urge him to empty, mount, rack him abroad, but not to the Hills, if you can find any other plain ground, as meadow, passure, or the like, especially if it lye along by a River; but in this case you can be no chuser, but must take the most convenient, making a vertue of necessity. Here air him in all points in the evening, as you did in the morning. Galloping both before and after water: Then Rack him up and down, and in your racking observe even from the Stable-door, in all your passages,

passages, especially when you would have him to empty, to let him smell upon every old and new dung you meet withal, for this will clear

his body, and repair his stomach.

alleges,

When you have Watered, and spent the evening in Airing till within night, (for nothing is more wholesom, or sooner consumeth soulness, than early and late Airings:) You shall then rack him home to the Stable-door; there alight, and do as you did in the morning, both within doors and without, and so leave him on his bridle for an hour and more. Then come again, and as you did in the foremoon, so do now; Rub well, draw his bridle, cleanse the Manger, put up his scattered Hay, sift him a quart of Oats, and so let him restrill nine a clock at night.

At nine a clock come to him, and first rub down his legs with Wisps, or with a clean cloath, or with your bare hands (which is best of all) then with a clean cloath rub his face, head, chaps, nape of the neck, and fore-parts; then turn up his cloaths, and rub over all his hinder-parts; then put down his cloaths, and sift him a quart of Oats, and give them him, then put into his Rack a little bundle of Hay, toss up his litter, and make his bed soft, and io

leave him till the next morning.

int in C

thing without the omission of any one particle, as hath been formerly declared; and thus you shall keep your Horse constantly for the first fortnight, in which, by this double daily exercise, you shall so harden his sless, and consume his soulness, that the next fortnight (if you be a temperate man) you may adventure to give him some heats.

But here give me leave to digress a little for fatisfaction sake, and to answer objections that may be urged touching the quantity of Provender which I prescribe, being but a quart at a meal, seeing there be many Horses that will eat a much larger proportion; and to scant them to this little, were to starve, or at the best

to breed weakness.

But if it be understood rightly, I set not this down as an infallible Rule, but a President that may be imitated, yet altered at pleasure: For I have lest you this Caveat, That if your Horse cat this with a good stomach, you may give him another, leaving the proportion to the Feeders discretion; because it is impossible in Writing, to make one measure for all stomachs. And for mine own part, I chose the quart, as the most indifferent proportion; for albeit many Horse will eat more, yet I have known some that would hardly eat this and believe it, what Horse soever shall but eat this, and in this manner,

manner, he shall neither starve, lose strength, you nor be much hungry.

So now again to the giving of Heats.

### Four considerations in giving of Heats.

Now touching Heats, you are to take to your self these four Considerations.

1. That two Heats in the week is a sufficient that proportion for any Horse of what condition or

Pro. State of body soever.

rer-

ume

give

e for

will

**Scant** 

fto-

aving

mine

f in-

what

2. That one Heat should ever be given on that day in the week, on which he is to run his Match; as thus: Your Match-day is a belt Monday, your Heating-dayes are then Mondayes and Fridayes; and the Monday to be ever the harper heat, both because it is the Prefe day of his Match, and there is three dayes ed at rest betwixe it and the other heat. If the day year, be Tuesday, then the heating dayes are Tueslayes and Saturdayes; if Wednesdayes, then Wednesdays and Saturdays, by reason of the Lords day; if on Thursdays, then Thursdays tion; and Mondays, and so of the rest. make

3. You shall give no Heat (except in case of extremity ) in Rain or foul Weather, but ather to defer hours and change times; for t is unwholfom and dangerous. And theree that ore in case of showrs and incertain weather. rou shall have for the Horse a lined hood, with lined ears, and the nape of the neck with lined to keep out rain, for nothing is more dangerous than cold Wet falling into the Ears, and upon the nape of the Neek and

Fillets.

4. Lastly, observe to give the Heats (the weather being seasonable) as early in the morning as you can; that is, by the spring of day; but by no means in the dark; for it is to the Horse both unwholesom and unpleasant; to the Man a great testimony of line Religious and to both an act of danger and precipitation.

### The second fortnights Feeding.

and ly

Now to come to the lecond fortnights penny Feeding: touching your first approaching to the Stable, and all other by-respects, a cleansing and the like, you shall do all things as in the first fortnight; only before you put on his Bridle, give him a quart of Oats which as soon as he hath eaten, bridle him up, and dress him, as before shewed; ther cloath, saddle, air, water, exercise, and bring him home, as before shewed; only you shall not put Hay into his rack to tear out, but let him eat it out of your hands, handful after handful, and so leave him on his bridle for an hour more; then come to him, and after rubbing

and other ceremonies, fift him a uart of Oats, and fet them by: then take a bout, and made in this manner.

# The first Bread.

Take three Pecks of clean Beans, and one eck of Wheat, mix them together and grind nem; then boult it through a reasonable ne Raunge, and knead it up with great store f Barm or Lightning, but with as little water may be; labour it in the Trough painfully, nead it, break it, and after cover it warm, nd lye and swell; then knead it over again, nd mould it up into big loaves, like twelveenny houshould loaves, and so bake it well, nd let it foak foundly; after they are drawn, irn the bottoms upward, and let them

At three dayes old, or thereabout, you may ive this Bread, but hardly sooner; for noning is worse than new bread; but if necessiy compel you that you must sooner give it, or hat the bread be clammy or dank, so as the lorse taketh distaste thereat, then cut the loaf n thin shivers, and lay it abroad in the Sieve odry; then crumbling it small with his Oats,

ou may give it safely.

die ha

ou the buck ful elle idle in a se

But to return to my purpole, when you

have taken a loaf of this bread, chip it very well, then cut it into thin Lyces, and put three or four thereof (fmall broken) into his Oats you had before fifted, and so give them to him.

About eleven a clock come to him, and by ceremonies give him the same quantity of Bread and Oats, and so leave him till afternoon.

At one a clock in the afternoon (if you intend not to give him a heat the next day) feed him with Bread and Oats, as you did in the forenoon; and so consequently every meal following for that day, observing every action and motion, as before shewed

But if you intend the next day to give him an heat (to which I now bend mine aim) you shall then only give him a quart of Oats clear sifted, but no Hay, and so let him rest till e-

vening.

At four a clock, before you put on his bridle, give him a quart of clean-fifted Oats, and when they are eaten, bridle him up, dress, cloath, saddle, air, water, exercise, bring home and order, as before shewed; only give no Hay at all.

After he hath stood an hour on his bridle, give him a quart of Oats; and when they are eaten, put on his Head a sweet Muzzel, and so

let him rest till nine a clock at night.

Now

eating

your

T

ther,

if it be

if it be

fides,

wile he

The

the be

nuzze

oinlar

Now as touching the use of this Muzzel, Ind which is the best, you shall understand,
That as they are most useful, being good and ightly made, so they are dangerous and hurtul, being abused and falsly made. The true ase of them, is, To keep the Horse from eatng up his litter, from gnawing upon boards y o and mud-walls, and indeed to keep him from 191 ating any thing but what he receiveth from your own hands.

These Muzzels are sometimes made of Leaher, and stampt full of holes, or else close, out they are unlavoury and unwhollom: for f it be allomed Leather, the allom is offensive; f it be tann'd or liquor'd Leather, the Tanners uze and grease are fully as unpleasant. Beides, they are too close, and too hot, and both make an Horse fick, and cause him to reain his dung longer in his body than othervise he would do.

feed

mea

n hi

Oats

drea

hom

ve n

ridle

ey all

The best Summer Muzzel, ( and indeed he best generally at all times ) is the Nernuzzel, made of strong Pack-thred, and knit xceeding thick and close in the bottom, and o inlarged wider and wider upward, to the niddle of the Horses head; then bound aout the top with Tape, and on the near-fide loop, and on the far-fide a long string to aften it to the Horses head.

The best Winter Muzzel ( and indeed tolerable tolerable at any time ) is that which is made of double Canvas, with a round bottom, and a square lattice window of small tape before both his nostrils, down to the very bottom of the muzzel, and upward more than an handful; this must also have a loop and a string to fasten it about the Horses head.

At nine a clock at night come to the Stable, and after by-ceremonies done, give him a quart of Oats clean fifted; and when they are eaten, pur on his Muzzel, tofs up his litter, and fo

leave him.

The next day early in the morning, come to the Horse (if he be standing, but if he be laid, do not disturbe him) and whilst he is lying, take a quart of Oats clean sitted, and rubbed between your hands, and wash them in strong Ale, and give them to the Horse; when they are eaten, bridle him up, and dress him, then Saddle as before shewed; being ready to depart, give him a new-laid Egg or two, then wash his mouth after it with a little Beer or Ale, and so lead away: At the door urge him to empty; then mount and rack him gently to the Course, ever and anon making him sinell another Horses dung.

When you are come within a mile (or thereabout) of the flarting-Post, alight and take off his Body-cloth, and Breast-cloth, and girt on the Saddle again: then fending

ogether in a viol-glass.
Then being muld,
The ire, and the Horse new Then being muld, and made warm at the ire, and the Horse newly come from his Hear, as before shewed) give him this Scouring, for t is a strong one, and avoideth all manner of solten grease and foulness.

### Ordering of the Horse after his Scouring.

As foon as you have given him this Scourig, presently let your Groom fall to rubbing is legs, and do your felf take off his Saddle id cloaths; and finding his body dry, run ghtly over it with your Curry-comb, after with

with the French Brush; and lastly, rub him will all over with dry cloaths, especially his made head, nape of the neck, and about his heart; hours then cloath him up warm as at other times, left, and wisp him round with great warm wisps; give and if you throw over him a loose blanker, it love will not be amiss in these extraordinary times, mother especially if the season be cold.

The Horse must fall full two hours after the lima receipt of the Scouring; but yet depart not draw out of the Stable, but keep the Horse walking; An for rest hinders the Medicine, and motion Oats. of fpe

makes it work.

Mary to he had been been After he hath fasted on the bridle two hed a hours, then you shall take a handful of manne Wheat ears, being your Polland Wheat, that bath is, without Awns; and coming to the Horse, to the first handle the roots of his ears, then put orthon your hands under his cloaths against his los heart upon his flanks, and on the neather heele part of his things; and if he find any new Aton Iweat arise, or any coldness of sweat, or i you see his body beat, or his breath move fast then forbear to give him any thing, for i life and Thews there is much foulness stirred up, or the which the Medicine working with a conque ring quality, the Horse is brought to a little fickness; therefore in this case you shall on ly take off his Bridle, put on his Coller, tol 13 Tions made the Stable dark and still) for other two made the Stable dark and still) for other two hours, which is the utmost end of that sickness. But if you find no such offence, then give him the ears of Wheat, by three or four cogether; and if he eat this handful, give him mother.

After he hath eaten the Wheat-ears, give with him a little knob of Hay clean dusted, and mu draw his bridle, rubbing his head well.

An hour after his Hay, fift him a quart of point Dats, and to them put two or three handfuls of spelted Beans, which you shall cause to be two eed and drest so clean as is possible from all sold anner of hulls, dust and filth whatsoever, the data as there may be nothing but the clean Beans; Hose of these Oats and Beans you shall break two en put three slices of Bread clean chipt, and give the lit to the Horse, and so leave him for two or eather oree hours.

At evening (before you dress him) give him to the like quantity of oats, beans, and bread to the him, bridle him, for ress and cloath him; for you shall neither the dele or air him forth, because this evening there his Heat, the Horse being foul, and the ouring yet working in his body, he may not that eceive any cold water at all.

After he is drest, and hath stood two ours on his bridle, then take three Pints of

clean sisted Oats, and wash them in strong Ale, and give them to the Horse; for this will inwardly cool him, as if he had drunk water.

After he hath eaten his washt meat, and rested upon it a little space, you shall at his seeding times, (which hath been spoken of before) with Oats and spelt Beans, or Oats and Bread, or all together, or each several and simply of it self, according to the appetite and liking of the Horse; seed him that night in a plentiful manner, and leave a knob of Hay in his Rack when ye go to bed.

The next day very early, first seed, then dress, cloath, saddle, air, water, and bring home, as at other times; only have a more careful eye to his emptying, and see how his grease and foulness wasterh.

# The third fortnights Feeding.

The third fortnight you shall make his Bread finer than it was formerly, as thus.

### The second Bread.

You shall take two Pecks of clean Beans, and two Pecks of fine Wheat, grind them on the black-stones, seirse them through a fine Raunge, and knead it up with Barm, and great store of Lightning, working it in all points, and baking it in the same fort as was shewed you in the former Bread.

With this Bread, having the crust cut clean away, and being old, as before shewed, with spelt Beans and clean sisted Oats, feed your Horse this fortnight as you did the former, observe his dressings, airings, feedings, heatings, and preparations, as in the sormer fortnight; only with these differences.

First, you shall not give your Heats so vice lently as before, but with a little more pleasure; as thus.

If the first Heat have violence, the second shall have ease, and indeed none to over-strain him, or to make his body sore.

Next, you shall not after his Heates, give him any more of the former Scouring; but

instead thereof, instantly upon the end of the lowed Heat, after the Horse is a little cooled and cloathed up; and in the same place where you rub him, give him a Ball, as big as an Hens egg, of that Confection which is mentioned in the office of the Farrier, and goeth by this title. The true manner of making those Cordial Balls, which cure any violent cold or glanders, which, &cc.

# The Fourth and last fortnights feeding.

The fourth and last fortnight you shall make your bread much finer than either of the

#### The last and best Bread.

Take three Pecks of fine Wheat, and one Peck of Beans, grind them on the blackstones, and boult them through the finest boulter you can get: Then knead it up with Iweet Ale, Barm, and new strong Ale, and the Barm beaten together, and the whites of twenty or thirty eggs; but in any wise no water at all: but instead thereof some small quantity of new milk, then work it up, bake it, and order it as the former.

With this bread, having the crust cut clean away, and with Oats well funned, beaten, and rubbed between your hands, then new win-

GLANK

find distast at these actions; as uneasiness in Shooes, heat and coldness in the Muzzel, disorderly platting or folding tayls, and the like, or they cannot reach these subtile apprehensions.

For mine own part, touching the nice and strait plaiting up of Horses tayls in the manner of Sakers or Docks, with Tape or Ribbon, which is now in general use, howsoever the ornament may appear great to the eye, yet I do not much affect it; because I know, if an ignorant hand have the workmanship thereof. he may many wayes give offence to the Horse, and in avoiding cumbersomness, breed a great deal more cumber: therefore I wish every one, rather to pals by curiofity ( which they call necessary ornament) than by these false Graces, to do injury to the Horse. Now for the necessary and indifferent things which are to be done, I had rather have them finished the day before, than on the morning of the course, because I would have the Horse that morning to find neither trouble nor vexation.

The next morning (which is the Match day) come to the Horse very early, take off his Muzzel, rub his head well, right his cloaths, and give them ease by unwisping, and using the plain Circingle; then give him a pretty quantity of Oats washt in Muska-

dine, or the whites of eggs; or if he refuse them, try him with fine drest Oats mixt with Wheat, or Oats simple; when he hath eaten them, if he be an evil and slow emptier, walk him abroad, and in the places where he used to empty, there intice him to empty; which as soon as he hath done, bring him home, and let him rest till you have warning to make ready.

But if he be a good and free emptier, then

stir him not, but let him lie quiet.

When you have warning to make ready, come to the Horse, and having washt his Snaffle with Muskadine, take off the Muzzel, and Bridle him up; but before you Bridle, if you think him too empty, give him three or four mouthfuls of the washed meat last spoken of, then bridle up and dress him; after pitch the Saddle and Gyrths with Cordwainers Wax, fet it on and gird it gently, fo as he may have a feeling, but no straitness: then lay a clean sheet over the Saddle, over it his ordinary cloaths, then his Body-cloth and Breast-cloth, and wisp him round with fost wisps; then if you have a Counter-pain, or Cloth of State for bravery lake, let it be fastened above all. Being now ready to draw out, give him half a pint of Muskadine, and so lead away.

In all your leadings upon the course, use gentle

gentle and calm motions, suffering the Horse to sincle on every dung. And in especial places of advantage, as where you find rushes, long grass lying, heath or the like; walk him in, and intice him to piss. But if you find no such help, then in especial places on the course, and chiefly towards the latter end; and (having used the same means before) break some of the wisps under him, and intice him to piss.

Also in your leading, if any white or thick foam or froth rise about the Horses mouth, with a clean hand-kerchief wipe it away; and carrying a Bottle of clean Water about you, wash his mouth now and then there-

Certain necessary Observations and Advantages for every Feeder to observe in sundry Accidents.

There is no unreasonable Creature of Pleasure, subject to so many disastrous chances of Fortune, as the Horse; and especially the RunRunning Horse, both by reason of the multiplicity of diseases belonging unto them, as also the violence of their exercise, and the nice tenderness of their keeping: and therefore it behoveth every Feeder, to be armed with such Observations as may discern mischiefs, and those helps which may amend them when they happen.

Of Meat and Drink.

The first observation therefore that I would arm our Feeder withal, is the true distribution of meat and drink.

Let him then observe, 'if there be any meat or drink, or other nourishment which he knoweth to be good for the Horse, yet he refuseth to eat it: in this case he shall not violently thrust it upon him, or by force cram him therewith; but by gentle degrees and cunning inticements, and by process of time, win him thereunto, tempting him when he is most hungry or most dry; and if he get but a bit at a time, it will foon increase to a greater quantity, and ever let him have less than he desireth; and that he may the sooner be brought unto it, mix the meat he loveth best, with that he loveth worst, till both be made alike familiar, and so shall the Horse be stranger to nothing that is good or wholsome.

Obser=

esta

WI

Ho

tog

That

hun

### Observation for Lameness.

Our Feeder must observe, if his Horse be subject to lameness or stiffness, to surbait or tenderness of feet; then to give him his heats upon smooth Carpet earth, and to sorbear strong ground, hard high-wayes, cross ruts and surrows, til extremity compel him.

### Observation from the estate of the Body.

Our Feeder must observe, that the strongest estate of body (which I account the highest and fullest of sless, so it be good, hard, and without inward soulness) to be the best and ablest for the performance of these wagers; yet he must herein take two considerations: the one the shape of the Horses body, the other his inclination and manner of seeding.

For the shape of body, There be some Horses that are round, plump, and close knit together, so that they will appear fat and well shaped, when they are lean and in poverty. Others are raw-boned, slender, and loose knit together, and will appear lean and deformed when they are fat, soul, and full of gross humours.

humours,

nice

oreit

fuch

and

hey

tion

he he

e re-

V10-

ning

him

un-

tata

eth;

tolly

e lo-

ning

So likewise for their inclinations, some Horses (at the first) will seed outwardly, and carry a thick rib, when they are inwardly clean as may be. There be others (as the later) that will appear lean to the eye, and shew nothing but skin and bone, when they are inwardly only grease. In this case the Feeder hath two helps to advantage his knowledge, the one outward, the other inward.

The outward help is the outward handling and feeling of the Horses body, generally over all his ribs, but particularly upon his short and

hindmost-ribs.

If his flesh generally handle soft and loose, and the fingers sink into it as into Down, then is the Horse soul without all question; but if generally it be hard and firm, only upon the hindmost-rib is softness, then he hash grease and soul matter within him, which must be avoided, how lean or poor soever he appear in outward speculation.

The inward help is only sharp exercise and strong scouring: the first will dissolve the

foulness, the latter will bring it away.

### Observation from the privy parts.

Our Feeder must observe his Horses stones, for if they hang down side, or low from his body, then is the Horse out of lust and heart,

and

and I

ones

m his

learly

and is either fick of grease, or other soul humours; but if they lie close couched up, and hid in a small room, then is he healthful and in good plight.

# Observation for the Limbs.

Our Feeder must observe ever, the night before he runs any Match, or sore Heat, to bathe his Horse legs well from the knees and Cambrels downwards, either with clarified Dogs-grease (which is the best), or Trottersoyl (which is the next), or else the best Hogsgrease, which is sufficient, and to work it in with the labour of his hands, and not with fire: for what he gets not in the first night, will be got in the next morning; and what is not got in the next morning, will be got in when he comes to uncloath at the end of the course: so that you shall need to use the Ointment but once; but the Friscase or Rubbing as oft as you find opportunity.

### Observation for Water.

Our Feeder shall observe, that albeit I give no direction for Watering the Horse after the Heats; yet he may in any of the latter fortnights (finding his Horse clean, and his grease consumed) somewhat late at night, as about fix a clock give him Water in reasonable hath quantity, being made luke-warm, and fasting wilke an hour after it.

Also, if through the unseasonableness of the world weather, you cannot water abroad, then you large shall at your watering hours water in the his ho house with warm water as a foresaid. Nor need you in this case heat all your water, but makeing a little very hot, put it into a greater, and fo make all luke-warm. If you throw an Our handful of Wheat-meal, Bran, or Oat-meal main finely poudered (but Oat-meal is best) into the w the water, it is very wholfome.

### Observation for the Ground to run on.

Our Feeder shall observe, That if the saint, Ground (whereon he is to run his Match) be dangerous, and apt for mischievous accidents, as Strains, Over-reaches, Sinew-bruises, and the like; that then he is not bound to give all his Heats thereon: but having made the But If th Horse acquainted with the nature thereof, then either to take part of the Course, as a mile, two, or three, according to the goodness of the ground, and so to run his Horse forth and again (which we call turning Heats); provided alwayes, that he end his Heat at the weighing Post, and that he make not his course less, but rather more in quantity than

that he must run. But if for some special cases he like no part of the course, then he may many times (but not ever) give his Heat upon any other good ground, about any spacious and large field, where the Horse may lay down the his body, and run at pleasure.

### Observations from Sweat.

need

the his

than than

Our Feeder shall take especial regard in all his airings, heatings, and all manner of exercises whatsoever to the sweating of the Horse, and the occasions of his sweating; as it and Horse sweat upon little or no occasions, as walking a foot-pace, standing still in the stable, and the like, it is then apparent that the Horse is faint, foul fed, and wanteth exercise.

If upon good occasion, as strong hears, great labour and the like, he sweat; yet his sweat is white froth and like soap-suds, then is the like of the like, he sweat is said white such that the like, he sweat; yet his sweat is and white some of the like, he sweat; yet his sweat is and white some of the like, he sweat; yet his sweat is and white some of the like, he sweat; yet his sweat is and white some of the like, he sweat; yet his sweat is and white some of the like, he sweat; yet his sweat is and white some of the like, he sweat; yet his sweat is and white some of the like, he sweat; yet his sweat is and white some of the like, he sweat; yet his sweat is and white some of the like, he sweat; yet his sweat is and white some of the like, he sweat; yet his sweat is and white sweat is and white sweat is sweat is sweat in the like, he sweat is sweat is sweat is sweat in the like, he sweat is sweat is sweat is sweat in the like, he sweat is sweat is sweat in the like, he sweat is sweat is sweat in the like, he sweat is sweat is sweat in the like, he sweat is sweat in the like, he sweat is sweat in the like, he sweat is sweat is sweat in the like, he sweat

# Observations from the Hair.

Our Feeder shall observe his Herf: Hoir

in general, but especially his neck, and those parts which are uncovered; and if they lye slick, smooth, and close, and hold the beauty of their natural colour, then is the Horse in good case; but if they be rough, or staring, or if they be discoloured, then is the Horse inwardly cold at the heart, and wanteth both cloaths and warm keeping.

Many other Observations there be, but these are most material, and I hope sufficient, for any reasonable understanding.

THE

yea

# OFFICE OF THE KEEPER.

e 10

ing,

### How to keep any Horse for pleasure, Hunting or Travel, &c.

would have our Keeper of these ordered Horses, to rise early in the morning of day, or before (according to the season of the year) and to sit the Horse the quantity of three Pints of good, old, and dry Oats, and put to them an handful or two of spelt Beans, hulls and all, and so give them to the Horse.

### Of Dressing and Watering.

After he hath eaten them, let him dress him; that is to fay, he shall first curry him all over with the Iron comb, from the head to the tayl, from the top of the shoulder to the knee, and from the top of his buttock to the hinder cambrel; then dust him all over with a clean dusting-cloth, or with an Horse

tayl made fast to an handle: then curry him all over with the French brush, beginning with his forehead, temples and cheeks, fo down his neck, shoulders and fore-legs, even to the secting on of his Hoofs, so alongst his fides and under his belly; And lastly, all about his buttocks and hinder-legs, even to the ground; then you shall go over again with your duster, then over all parts with your wet hands, and not leave (as neer as you can) one loofe hair about him, nor one wet hair; for what your hands did wet, your hands must rub dry again: You shall also with your wet hands cleanse his sheath, his yard, his cods and his tuell; and indeed not leave any secret place uncleansed, as ears, nostrils, fore-bowels, and between his hinderthighs: Then you shall take an Hair-cloth and with it rub him all over, but especially his head, face, eyes, cheeks, between his chaps, on the top of his fore-head, in the nape of the neck, down his legs, feetlocks, and about his pasterns. Lastly, you shall take a clean woollen-cloth, and with it rub him all over, beginning with his head and face, and so passing through all parts of his body and limbs before spoken of. Then take a wet .Mane-cloth, and comb down his Mane and Tayl.

Then saddle him, and ride him out to wa-

ne and

10 Hg

ter, warm him both before and after Water very moderately, and so bring him home dry without sweat; then cloath him up, after you have rubbed his head, body and legs, and let him stand on his bridle more than an hour.

#### Ordinary Keeping.

After he hath stood an hour, give him the former quantity of provender, and the same in kind.

After he hath eaten his provender, give him into his Rack a pretty bundle of Hay, and so let him rest till noon.

At noon give him the former quantity of provender, and the same in kind, and so let him rest till evening, only renewing his Hay if there be occasion.

At evening dress him as in the morning, then ride him forth to water, and do as you did in the morning.

When you come home, and have cloathed him up, let him stand on his bridle as before; then give him the former quantity of provender, so let him rest till nine a clock at night; at which time give him the former quantity of provender, and a pretty bundle of Hay, and so let him rest till the next morning.

G 3

Also observing ordinary keeping ever after your dressing, and at such times as you find best convenience, to bathe all his fore-legs from the knees and Cambrels down-ward with cold water, for it is wholsome, and both comforteth the sinews, and prevents scabs and swellings.

# Keeping in Travel and Sport.

Thus you shall do concerning his ordinary keeping at home where the Horse hath rest, and that you may dispose of hours as you please: but if you be either in travel, in sport, or other occasion, so that you cannot observe these particular times; then you must divide the main and whole quantity of meat into sewer parts and greater quantities, and so give them at the best convenience, ever observing to give the least quantity before travel, as a third part before mounture, and the two other when you come to rest.

Nor would I have you to distract your mind with any doubt or amazement, because I prescribe you five several times of seeding in one day, as if it should either over-charge you, or over-feed your Horse: questionless there is no such matter when you look into the true proportion: for it cannot be denied, That whosever is worthy of a good Horse,

moi

ver !

WOU

a W

then

atal

and

or good means to keep a good Horse, cannot allow him less than one Peck a day; nay, the Carrier, Carter, Poulter and Pack-Horse, will allow half a Peck at waterings; and this Allowance which I fer down, comes to no more: for fifteen pints of Oats, and one pint of spelt Beans unheaped, makes two Gallons, and that is one Peck Winchester measure.

Now to give it at twice, it fills the stomach more, makes the digestion worse, and the appetite weak: whereas to give less, but more oft, the stomach is ever craving, the digestion alwayes ready, and the appetite never wanting, so that health (without disorder) can never be a stranger; therefore once again thus

for ordinary keeping.

d

OU

119

ve

uī

16

ng

# Of giving Heats, Hunting and Travel.

But if you intend to give an Heat, as to Hunt, Gallop, Travel, or the like; (which I would wish you to do once, twice, or thrice a week, according to the ability of your horse) then observe all your former observations, only the night before, give him little or no Hay at all.

In the morning, before his Heat very early, and before his dreffing, give him three or four handfuls of clean sisted Oates, washt either in strong Beer or Ale. Then dress him, faddle saddle him, and give him his heat, he having first emptied himself well.

#### Ordering after Labour.

After his Heat, or end of Labour, rub him carefully, and bring him dry into the Stable; then after he is cloathed up, let him stand on his bridle at least two hours; then give him a little bundle of Hay to tear out upon his bridle, and an hour after feed him, as hath been before shewed; only with his first Oats give him an handful or better of Hemp-seed well dusted and mixt.

At night warm him a little water, and give it him luke-warm, with a little fine pounded Oatmeal thrown upon it; then an hour after give him his Provender, and a pretty bundle of Hay, and so let him rest till the next mor-

ning.

The next morning, do all things as in his ordinary keeping.

#### Some especial Precepts.

If he be a choice Horse, let him stand on litter both night and day, yet change oft and keep the planchers clean. If he be otherwise, then use your own discretion.

If you intend to Travel or Journey in

the

oin,

hoi

cafi

fed

the morning, then give no Hay, or but little the night before: If you journey in the afternoon, then give no Hay, or but little in the morning.

im

110

12 nis

ed

ier

or•

his

If your Horse sweat by exercise, take off the fweat ( before you rub him ) with the Glassing-knise, which is either a piece of a broken Sword-blade, or a piece of a broken Syth, for this will make a clean, a smooth, and a shining coat.

In Journeying, ride moderately the first hour or two, but after according to your oc-

cafions.

Water before you come to your Inn, if you can possibly; but if you cannot, then give warm water in the Inn, after the Horse hath fed, and is fully cooled within, and outward-

dy dried.

Trotters Oyl is an excellent Ointment, being applied very warm (and well chased into your Horses limbs and sinews ) to nimble and help stiffness and lameness. And Dogs grease is better, therefore never want one of them in your stable.

# Of Washing and Walking.

Neither Wash your Horse, nor Walk your Horse; for the first indangereth foundring in the body or feet, and breedeth all surfeits; the latter is the ground of all strong colds; which turn to glanders and rottenness; but if necessity compel you to either, as foul wayes, or long stayes, then rather wash your Horses legs with pails of water at the Stable door, than to indanger him in either Pond or River. And for walking, rather sit on his back to keephis Spirits stirring, than to lead him in his hand, and with dull spirits to receive all manner of mischiess.

This I think sufficient for the office of the Keeper.

# Observations in Ambling.

keep n his man-

There is not any motion in an Horse more desired, more useful, nor indeed more hard to be attained unto by a right way, then he motion of Ambling; and yet (if we will believe the Protestations of the Professors) not any thing in all the Art of Horsmanship more asse, or more several wayes to be effected, every man conceiving to himself a several mehod, and all those methods held as infallible naxims, that can never fail in the accomplishment of the work.

#### Mens Opinions and Errors.

But they which know truths, know the ercors in these opinions; for albeit, every man hat hath hardly a smell of Horsemanship, an discourse of a way how to make an Horse Amble, yet when they come to the performance formance of the motion, their failings are so great, and their errors so gross, that for mine own part, I never yet saw an exact Ambler. I confess some one man may make some one Horse Amble well, and perfectly; nay, more than one, peradventure many, and thereby assume to himself a name of Perfection; yet such a man have I seen err grossy, and spoyl more than his labour was able to recompence.

But leaving mens errors, because they are past my reformation, I will only touch at some principal Observations, which in mine opinion I hold to be the easiest, the certainest, and readiest for the effecting of this work; and withal glance at those absurdaties which I have seen followed, though to little purpose, and

less benefit.

#### Ambling by the plowed Field.

There is one commends the new plowed Lands, and affirms, That by toyling the Horse thereon in his foot-paee, there is no way so excellent for the making of him to Amble; but he forgets what weakness, nay, what lameness such disorderly toyl brings to a young Horse, nay, to any Horse; because the work cannot be done without weariness, and no weariness is wholsome.

Ambling

And

loads

tolera

hat it

#### Ambling by the Gallop.

Another will teach his Horse to Amble from the Gallop, by sudden stopping, a more sudden choking him in the cheeks of the mouth, thrusting the Horse into such an amazedness betwixt his gallop and his trot, that losing both, he cannot chuse but find out Ambling.

But this man forgets not alone the error before spoken, (which is too great toyl) but
also spoyls a good mouth (if the Horse had
one), loses a good Rein (if there were any),
and by over-reaching and clapping one soot against another, indangers upon every step an
Hoof-breach, or Sinew-strain.

# Ambling by Weights.

Another sayes there is nothing of such use for Ambling as Weights; and thereupon one loads his Horse with unmerciful Shooes of intolerable weight, and forgets how they make him entersere, strike short with his hind-seet; and though his motion be true, yet is so slow that it is not worth his labour.

WEV

15,00

Another folds great Weights of Lead about his feetlock-pasterns, and forgets that they they have all the mischiefs of the former, be fides the indangering of incurable strains, th crushing of the crownet, and the breeding c ring-bones, crown-scabs, and quitter-bones.

Another loads his Horse upon the Fillet with Earth, Lead, or some other massie substance, and forgets the swaying of the Back the over-straining of the Fillets, and a genera disabling of all the hinder parts.

# Ambling in hand, or not ridden.

der-to

Iron, a

either

he hin

every ?

but the

eart m

trong Amble,

Another struggles to make his Horse Ambl in his hand before he mounts his back, by th help of some Wall, smooth Pale or Rail, and by chocking the Horse in the mouth with the bridle-hand, and correcting him with his roo on the hinder houghs, and under the bellwhen he treadeth false, and never remem bers into what desperate frantickness it drive an Horse before he can make him understand his meaning, as plauging, rearing, sprauling out his legs, and using a world of other an tick postures, which once settled, are hardly ever after reclaimed: besides, when he hat spent all his labour, and done his utmost, a soon as he mounts his Horses back, the Horse is as far to feek of his Pace, as if he had neve known such a motion. Amblin

ner, ains, th

eeding (

affie fub

Withth

h his ro the bel

remen

it drift

foraula

other at

e hard

he ha

moth,

ad neve

Another finds out a new stratagem, and in despite of all opposition in the Horse, will make him Amble perfectly, and thereupon he makes him a pair of hinder Shooes with long spener spures or plates before the Toes, and of such length, that if the Horse offer to trot, the hinder-foot beats the fore-foot before it.

But he forgets that the Shooes are made of Iron, and the Horses Legs of Flesh and Blood: neither doth he remember with what violence the hinder-foot follows the fore-foot, nor that all, all every stroke it gives, can light upon any place but the back finews, then which there is no part more tender, nor any wound that brings fuch incurable lameness.

# Ambling by the help of fine Lists.

Another (out of quaintness more than strong reason ) strives to make his Horse Amble, by taking of fine foft Lists, and folding them strait about the Cambrel, in that place where you garter an Horse for a stine-Itrain, and then turn him to Grass for a fortnight or more, in which time (faith he) he will fall to a perfect Amble; (for it is true, he cannot trot but with pain) then taking away lated

the lists, the work is finished.

But (under the correction of the Profesfors of this Foreign trick, for it is a Spanish practice) I must assure them, that if they gain their purpole, they must offend the hour members. If they hurt not the limbs, they hely at lose their labour; but however this is most affured, that the Amble thus gained, must be disgraceful, crambling and cringing in the hinder-parts, without comliness, speed, or clear deliverance.

# Ambling by the Hand only.

Another ( and he calls himself the Master Ambler of all Amblers ) affirms, There is no true way of making an Horfe to Amble but by the Hand only; and I am of his opinion, could the fecret be found out, or could a man make a Horse do all that he imagined, and as he imagined; but Horses are rebellious, and men are furious, and the least of either of these spoyls the whole work; and it is impollible for any man to fadge an Horse to a new motion utterly unknown, against which he will not refift with his uttermost powers. Besides, to do this action with the Hand only, it must only be done from the Horses mouth, and that mouth must of necessity be red away altered from his first manner of riding; for to use all one hand, must preserve all one motion; Polis and then where is Ambling which was not Spann known at the first backing? Again, we strive if they at the first backing of an Horse, to bring his d the mouth to all sweetness, his Rein to all statelithey ness, and the general carriage of his body to of al- ill comlines. Now in this course of Ambling mild by the hand only, the mouth must be changed in the from the chaps to the weeks of the mouth, etd, or which is from sweetness to harshness: his Rein must be brought from constancy to inconstancy: for the eyes that did look upward, the Nose and muzzel which was couched inward, must be turned outward, and the general comlinels Mafer of the bodies carriage, must be brought to tisorder and false treading, or else he shall nebuty rer accomplish the true Art of Ambling by the acould hand only.

#### Ambling by the Tramel.

n make dashe

s and ither of

Horle

There is another, (I will not call him the isim best, because his error may be as great as any) the 101 and he will make his Horse Amble by the help of the Tramel only, which I confess is nearest newers he best and most assured way, yet he hath d or many errors, as followeth.

#### Errors in the Tramel.

First, he loses himself in the want of knowledge, for the length of the Tramel, and either he makes it too long, (which gives no stroke) or too short (which gives a false stroke); the first makes an Horse hackel and shuffle his feet confusedly, the latter makes him roul and twitch up his hinder feet so suddenly, that by custome it brings him to a string-halt, from which he will hardly be recovered ever after.

Another loses himself and his labour by misplacing the Tramel; and out of a nicenels, to seem more expert than he is, or out of fearfulness to prevent falling ( to which the Tramel is subject ) places them above the knee, and above the hinder-hough. the Rule is neither good nor handsome; for if the Tramel be too long or loose, that i gives no offence to the Sinews, and other Li gaments about which they must necessarily be bound, when they are raised so high, the they can give no true stroke, neither can th fore-leg compel the hinder to follow it. An if they be so short or strait, that the fore-le cannot step forward, but the hinder must g equal with it, then will it so press the mai finew of the hinder-leg, and the veins an

fleshy part of the fore-thighs, that the Horse will not be able to go without halting before, and cringing and crambling his hinder-parts so ill-favouredly, that it will be irksom to behold it: besides, it will occasion swellings, and draw down rumours; which will be more noysom, than the Pace will be beneficial:

Another makes his Tramel of such course or hard stuff, or else girds it so strait, or leaves it fretting up and down so loose, that he galls his Horse legs, and leaves neither hair or skin upon them; at the best it leaves such a foul print and mark upon the legs, that every one will accuse both the Horse and his Teacher of

disgrace and indiscretion.

pult.

le m

As these, so I must conclude with the last error of the Tramel, which is, mens opinions; and though it be the most insufficient, yet it hash the greatest power to oversway truth, and that is, the Tramel is utterly unnecessary, and unprofitable, and the desender worthy of no imployment, alledging the Land only to be excellent.

The errors I have already confuted; it now remains (after all these faults finding) that I shew the truest, the easiest, and that way which is most uncontroulable for the making of an Horse to Amble, with all the gracefulness

and perfection that can be required.

First, made of

galls.

When you are about undoubtedly to make an Horse Amble truly, and without controulment: First, try with your hand by a gentle or deliberate racking and thrusting of the Horse forward, by helping him in the weeks of his mouth with your Snaffle (wch muft be smooth, big and full ) correcting him first on one fide. then on another with the calves of your legs, and sometimes with the spur, if you can make him of himself strike into an Amble; but by no means disorder or displace either his mouth, head, or neck; if you find you can make him Arike into an Amble, though shuffling diforderly, there will be much labour faved: for that proclivity, or aptness to Amble, will make him with more easiness and less danger, endure the use of the Tramel, and make him find the motion without stumbling or amazement: But if you find he will by no means either apprehend the motions or intentions, then struggle not with him, but fall to the use of the Tramel in this manner following.

### The form of the Tramel.

But before I come to the use and vertue thereof

TOI

thereof, I will shew you the form and substance whereof it ought to be made; because nothing hath ever done this Instrument more injury, than falle substances and falle itroul- Thapes.

Therefore some make these Tramels all of Horse Leather, and that will either retch or break; his the first mars the work by uncertainty, the

nger,

e him

heule

erech

A third makes it of strong List, and that but we hath all the faults of both the former; for the outh, softness will not let it lye close, and the gentleehim ness makes it stretch out of all compass, or

dilor break upon every stumble.

And as these, so there are a world of other uleless Tramels; for you must understand, that touching the true Tramel, the fide-ropes must be firm, without yielding an hair: The Hose must be soft, lie close, and not move from means his first place; and the Backband must be flat, no matter how light, and so defended from the Fillets that it may not gall. And this Tramel must be thus made, and of these Substances.

First, for the side-Ropes, They must be made of the best, finest, and strongest Packthred, such as your Turkey-thred, and twined

by the Roper into a delicate strong cord, yet Rope at the utmost, not above the bigness of a small offi Tack-line, with a noofe at each end, fo ftrong lope as is possible to be made; neither must these fide Ropes be twined too hard, but gentle, and with a yielding condition, for that will follow bring on the motion more easie, and keep the Tramel from breaking; now these side-ropes must be just 36 inches in length, and so equal one with another, that no difference may be espied.

For the Hofe, which must be placed in the small of the fore-leg, and the small of the hinder-leg above the feet-lock, they must be made of fine Gyrth-web, which is fost and pliant, and lined with double Cotton: over the Gyrth-web must be fastned strong Tabbs of white Neats-leather well tallowed, and fuited to an even length, and stamped with holes of equal diftance, which shall pass through the noozes of the fide-Ropes, and be made longer or shorter at pleasure, with very strong Buckles. These Hose, the Gyrth would be 4 inches in length, and the Tabbs ten.

The Back-band being of no other use but to bear up the side-ropes, would (if you Tramel all the fore-legs) be made of fine Gyrthweb, and lined with Cotton; but if you Tramel but one-fide, then any ordinary Tape will serve, being sure that it carry the side.

Ropes

#### The true use of the true Tramel.

When you have brought your Horse into an even smooth path, without rubs or roughness, you shall there hose the near foreleg, and the near hinder-leg; then put to them the side-rope, and see that he stand at that just proportion which Nature her self hath formed him, without either straining or inlarging his members, and in that even and just length stay the side-Rope by a small Tape fastned up to the Saddle. Then with your hand on the Bridle, straining his head, put him gently forward, and if need be have the help of a by-stander to put him forward also, and so force him to Amble up and down the Road with all the gentleness you can, suffering him to take his own leifure, that thereby he may come to an understanding of his restraint, and your will for the performance of the motion; and though he stapper or stumble, or peradventure fall now and then. yet it matters not, do you only stay his head,

liket

wh a

And that this may be done with more ease and less amazement to the Horse, it is not amis (at his first Trameling) that you give your side-ropes more length than ordinary, both that the twitches may be less sudden, and the motion coming more gently, the Horse may

sooner apprehend it.

But as soon as he comes to any perfectnes, then instantly put the side-ropes to their true length. For an inch too long, is a foot too slow in the pace; and an inch too short, causeth ralling, a twitching up of the legs, and indeed a kind of plain halting.

#### When to alter the Tramel.

When the Horse will thus Amble in your hand perfectly, being Trameled on one side, you shall then change them to the other side, and make him Amble in your hand as you did before. And thus you shall do, changing from one side to another, till with this half Tramel he will run and Amble in your hand without snappering or stumbling, both readily

and swiftly. When this is attained unto, which cannot be above two or three hours nwo be. labour (if there be any tractablenes), you d to may then put on the whole Tramel, and the broad flat Back-band, Trameling both fides equally, and so run him in your hand (at the eale ta- utmost length of the bridle ) up and down our the road divers times, then pause, cherish, and to it again; and thus apply him till you have the brought him to that perfection, that he will Amble swiftly, truly and readily, when, where, and how you please: Then put him upon uneven and uncertain wayes, as up-hill and down-hill, where there are clots and roughness, and where there is hollowness and false treading,

may

nels.

rue

W0.

leth

100

de,

ng alt

#### When to mount his Back.

Now when he is perfect in your hand apon all these, you may then adventure to nount his Back, which (if you please) you nay first do by a Boy, or Groom, making the Horse Amble under him, whilst you stay his read to prevent danger, or to see how he triketh. Then after mount your felf, and vith all gentleness and lenity, increasing his pace more and more, till you come to the leight of perfection. And thus as you did

before in your hand, so do now on his back, put first with the whole Tramel, then with the half, and changing the Tramel oft, first from one fide, then to another, then altering grounds till you find that exquisitness which vou desire.

And this must be done by daily exercise and and labour, as twice, thrice, sometimes oft-

ner in the day.

#### When to Journey.

When you have attained your wish in the you perfection of his Stroke, the nimbleness of ina his Limbs, and the good carriage of his what Head and Body, you may then take away the Tramel altogether, and exercise him pha without it.

But this exercise I would have upon the 18th High-way, and not ( Horse-courser like) in B a private smooth Road, for that affords but a Tra cousening pace, which is left upon every small weariness: therefore take the High-way our forward for three, four, or five miles in a of morning, more or less, as you find the Horses hon aptness and ability.

Now if in this Journeying, either through you weariness, ignorance, or peevishness, you be find in him a willingness to forsake his O

pace,

lorie

This exercise you shall follow day by day, and every day increasing it more and more, till you have brought him from one mile to many: which done, you may then give him ease, as letting him rest a day or two, or more, and then apply him again; and if you find in him neither error nor alteration, then you may resolve your work is finished: For in all mine Experience, I never found this way to fail.

But if any alteration do happen, (as many phantastick Horses are subject unto) if it be in the motion of his pace, then with your hand reform it.

But if that fail, then the use of the half-

Tramel will never fail you.

Now if the error proceed from any other occasion, look seriously into the cause thereof, and taking that away, the effect will soon cease; for you are to understand, that in this manner of teaching an Horse to Amble, you are forbidden no help or beaufit whatsoever which belongs unto Horsemanship, as Chain, Cavezan, Musroude, Headstrain, Mar-

#### 108 AMBLER!

Martingale, Bit, or any other necessary Instrument, because this motion is not drawn from the mouth, but from the limbs.

Many things else might be spoken on this subject, but it would but load Paper, and weary memory, and I aim only at short Essayes, and true new Experiments, therefore this already writ I hold sufficient.

# BUYER!

Wherein is shewed all the perfections and imperfections that are or can be in a Horse.

Observations and Advertisements for any man, when he goeth about to buy an Horse.

Here is nothing more difficult in all the Art of Horsemanship, than to set down onstant and uncontroulable Resolutions, by which to bind every man's mind to an unity f consent in the buying of an Horse: for coording to the old Adage, What is one ran's meat, is another man's porson; what one seeds, another dislikes. But to proceed acording to the Rule of Reason, the Precepts of the Ancients, and the modern practice of ur present conceived opinions, I will, as richy as I can (and the rather because it is

a labour I never undertook in this wife before) shew you those observations and advertisements which may fortifie you in any hard Election.

#### The end for which to Buy.

First therefore you are to observe, That is you will elect an Horse for your hearts contentment, you must consider the end and purpose for which you buy him, as whether for the Wars, Running, Hunting, Travelling, Draught or Burthen.

Every one having their several Characters, and their several Faces both of beauty and

uncomlines.

But because there is but one truth, and one persection, I will under the description of the persect and untainted Horse, shew all the impersections and attaindness which either Nature or Mischance can put upon the Horse o

greatest deformity.

Let me then advise you that intend to buy an Horse, to acquaint your self with all the true shapes and excellencies which belong to an Horse, whether it be in his natural and true proportion, or in any accidental or outward increase, or decrease of any limb or member and from their contraries to gather all thing whatsoever that may give dislike or offence.

thing

rce.

Eli

To begin therefore with the first principle of Election, you shall understand they are divided into two special Heads, the one General, the other Particular.

#### The General Rules

The General Rule of Election is, first the end for which you buy; then his Breed or Generation, his Colour, his Pace, and his Stature. These are said to be general, because they have a general dependance upon every mans several opinion, as the first which is the end for which you buy, it is a thing shut up only in your own bosome.

#### Of Breed.

The other, which is Breed, you must either take it from faithful report, your own knowledge, or from some known and certain Characters, by which one strain or one Country is distinguished from another; as the Neapolitan is known by his Hauk-nose; the Spaniard by his small Limbs; the Barbary by his sine Head, and deep Hoof: The Dutch by his rough Legs; the English by his gene-

ral strong knitting together, and so forth of divers others.

Hyer co

II 40

of the A

# Of Colour

As for his colour, although there is no colour utterly exempt from goodness, for I have seen good of all, yet there are some better reputed than others; as the Daple-gray for beauty, the Brown-bay for service, the Black with Silverhairs for courage, and the Lyard or true mixt Roan for countenance. As for the Sorrel, the Black without white, and the unchangeable Iron-gray, are reputed cholerick; the bright-Bay, the sleabitten, and the Black with white marks are sanguinists; the Black, White, the Yellow, Dun, and Kiteglewed, and the Pyeball'd, are flegmatick; and the Ches-nut; the Mouse dun, the Red-bay, and the Blue-gray, are melancholy.

# Pace, as Trotting.

Now for his Pace, which is either Trot, Amble, Rack, or Gallop, you must refer it to the end also for which you buy; as if it be for the Wars, Running, Hunting, or your own Pleasure, then the Trot is most tolerable, and this motion you shall know by a cross moving of the Horses limbs, as when the far force

of fore-leg, and the near hinder-leg; or the near fore-leg, and the far hinder-leg, move and go forward in one instant. And in this motion, the nearer the Horse taketh his limbs from the ground, the opener, the evener, and flow the shorter is his Pace: For to take up his seer Gen Movenly, shews stumbling and lameness: tread narrow or cross, shews enterfeiring or the failing; to step uneven, shews toyl and weariness; and to tread long, shews over-reaching,

#### Ambling .

Yermixt

, the eable

TOUR

tore.

ght= Now if you elect for eale, great Persons eats, or long Travel, then Ambling is requihite the red. And this motion is contrary to Trotting: pression now both the feet on one-fide must move the iqually together; that is, the far fore-leg, and my, he far hinder-leg; and the near fore-leg, and he near hinder-leg. And this motion must go ust, large, smooth, and nimble: for to tread alse, takes away all ease: to tread short, rids o ground: to tread rough, shews rolling; nd to tread un-nimbly, fhews a false Pace that ever continueth; as also lameness.

#### Racking.

If you elect for Buck-hunting, Galloping n the High-way, Post, Hackney, or the like, then a racking pace is required: and this motion is the same that Ambling is, only it is in a swifter time, and a shorter tread; and though it rid not so much ground, yet it is a little more easie.

any

and

for

Will

they

refer

fittef

then

The

ploya

and S

natur

rances

are for

#### Galloping.

Now to all these Paces must be joyned a good Gallop, which naturally every trotting and racking Horse hath; the Ambler is a little unapt thereunto, because the motions are both one, so that being put to a greater swiftness of Pace than formerly he hath beer acquainted withal, he handles his legs confusedly, and out of order; but being trained gently, and made to understand the motion, he will as well undertake it as any trotting Horse whatsoever.

Now in a good Gallop you are to observe these vertues. First, That the Horse which taketh his feet nimbly from the ground, but doth not raise them high, that neither rolleth nor beateth himself, that stretcheth out his fore-legs, follows nimbly with his hinder and neither cutteth under his knee (which called the Swist cut) nor crosseth, nor classes one soot on another, and ever leadeth with his far fore-soot, and not with the near this Horse is said ever to Gallop most comely and most true, and it is the fittest for speed,

any fwift imployment. If he Gallop round, and raise his fore-feet, he is then said to Gallop strongly, but not swiftly, and is sittest for the great Saddle, the Wars, and strong encounters. If he Gallop slow, yet sure, he will serve for the High-way: but if he labour his feet consused, and Gallop painfully, then is he good for no Galloping service: beside, it shows some hidden lameness.

#### Stature.

Lastly, Touching his Stature, it must be referred to the end for which you buy, ever observing that the biggest and strongest are sittest for strong occasions, and great burthens, strong draughts, and double carriage; The middle-size for pleasure, and general imployments; and the least for ease, street-walks, and Summer Hackney.

#### The Particular Rule.

Now touching the Particular Rule of Election, it is contained in the discovery of natural Deformities, accidental outward Sorrances, or inward hidden Mischiers, which are so many, and so infinite, that it is a world of work to explain them; yet for satisfaction sake, I will in as methodical man-

I 2

ner

nor as I can, shew what you are to observe in this occasion.

#### How to stand to view.

When a Horse is brought unto you to buy (being satisfied for his Breed, his Pace, Colour and Stature, then) see him stand naked before you, and placing your self before his Face, take a strict view of his Countenance, and the cheerfulness thereof: for it is an excellent glass wherein to behold his goodness and best perfections; As thus

#### His Ears

If his Ears be small, thin, sharp, short, pricked, and moving; or if they be long, yet well set on, and well carried, it is a mark of beauty, goodness, and mettle: but if they be thick, laved or lolling, wide set, and unmoveing, then are they signs of dulness, doggedness, and evil nature.

#### His Face.

If his Face be lean, his Forehead swelling outward, the mark or feather in his Face set high, as above his Eyes, or at the top of his Eyes; if he have a white Star, or white Ratch

of

of an white

of b

of an indifferent fize, and even placed, or a white snip on his Nose, or Lip; all are marks of beauty and goodness. But if his Face be sat, cloudy or skouling, his Forehead slat as a trencher, (which we call Mare-saced); or the mark in his Forehead stand low, as under his Eyes: If his Star or Ratch stand awry, or in an evil posture, or instead of a sinp, his Nose be raw and unhairy, or his Face generally bald; all are signs of desormity.

## His Eyes.

If his Eyes be round, big, black, shining, starting or staring from his Head; if the black of the Eye fill the pit, or outward circumference, so that in the moving, none (or very little) of the white appeareth, all are figns of beauty, goodness, and mettle: but if his Eyes be uneven, and of a wrinkled proportion, if they be little (which we call Pig-eyed) both are uncomely, signs of weakness: If they be ed and fiery, take heed of Moon-eyes, which s next door to blindness. If white and walled, it shews a weak fight, and unnecessary farting, or finding of Boggurds: If with white Specks, take heed of the Pearl, Pin and Web: If they water or shew bloody, it shews bruises; and if they Matter, they shew old ver-riding, festred rhumes, or violent strains.

Ιż

TÉ

If they look dead or dull, or are hollow, or much sunk, take heed of blindness at the best; the best is of an old decrept generation: If the black fill not the pit, but the white is alwayes appearing; or if in moving, the white and black be seen in equal quantity, it is a sign of weakness, and a dogged disposition.

# His Cheeks and Chaps.

itr

lon

upp

10

of (

ful

If handling his Cheeks or Chaps, you find the bones lean and thin, the space wide between them, the Thropple or Wind-pipe big as you can gripe, and the void place without knots or kernels; and generally the Jaws fo great, that the Neck feemeth to couch within them; they are all excellent figns of great wind, courage, and foundness of Head and Body. But if the Chaps be fat and thick, the space between them closed up with gross substance, and the Thropple little; all are figns of short wind, and much inward foulness: If the void place be full of knots and kernels, take heed of the Strangle or Glanders; at the best, the Horse is not without a foul cold. If his Jaws be so strait, that his Neck swelleth above them, if it be no more than natural, it is only an nucomely fign of fhort wind and purfickness, or groffeness; but if the swelling be long, and close by his Chaps, like a Whetstone, Whetstone, then take heed of the Vives, or some other unnatural Impostume.

# His Nostrils and Muzzel.

of his

then

f on

they a Sciron

Scabs Will i

terns

prerfe

& Le

de a f

ound

and if

Malear

Leo' Paffer

From his Head look down to his Breaft, and see that it be broad, out-swelling, and adorned with many features: for that shews strength and indurance. The little Breast is uncomely, and shews weakness; the narrow Breast is apt to stumble, fall, and enterfeire before: the Breast that is hidden inward, and wanteth the beauty and division of many feathers shews a weak armed heart, and a Breast that is unwilling and unsit for any violent toyl or strong labour.

## His Fore-thighs.

Next, look down from his Elbow to his Knee, and see that those Fore-thighs be rush-grown, well horned within, sinewy, sleshy, and out-swelling, for they are good signs of strength; the contrary shews weakness, and are unnatural.

### His Knees,

Then look on his Knees that they carry proportion, be lean, finewy, and close knit, for hey are good and comely: But if one be bigger or rounder than another, the Horse hath received

feceived mischief: If they be gross, the Horse is Gouty: if they have scars, or hair broken, it is a true mark of a stumbling Jade, and a perpetual Faller.

# His Legs.

and ahews

aft is

rfeire

dand

y feaand a

19 VIO-

to his

rush-

and and

prohey

i ger hath

From his Knees look down to his Legs, to his Pasterns; and if you find them clean, lean, flat, and finewy, and the inward bowt of his Knee without seams, or hair-broken, then he shews good shape and soundness: But if on the in-fide the Leg you find hard knots, they are Splinters; if on the out-side, they are Scirows or Excressions; If under his Knees be Scabs on the in-side, it is the Swift-cut, and he will ill endure Galloping; if above his Pasterns on the in-side you find scabs, it shews interfeiring: but if the scabs be generally over his Legs, it is either extream foul keeping, or else a spice of the Maunge; if his flesh be far, round and fleshy, he will never endure labour: and if on the inward bowt of his Knees you find seams, scabs, or hair-broken, it shews a Maleander, which is a cankerous Ulcer.

# His Pasterns.

Look then on his Pastern-Joynt and his Pastern; the first must be clear and well knit together,

together, the other must be short, strong and upright standing: for if the first be big, or sweld, take heed of Sinew-strains and Gourdings: If the other be long, weak or bending, the limbs will be hardly able to carry the body without tiring.

## His Hoofes.

For the Hoofes in general, they should be black, smooth, tough, rather a little long than round, deep, hollow, and full founding: For white Hoofes are tender, and carry a Shooe ill: A rough, gross seamed Hoof, shews an age, or over-hearing. A brittle Hoof will carry no Shooe at all: An extraordinary round Hoof is ill for toul-wayes and deephunting. A flat Hoof that is pumified, shews foundring; and an Hoof that is empty and hollow founding, shews a decayed inwardpart, by reason of some wound, or dry sounder. As for the crown of the Hoof, if the hair lye smooth and close, and the flesh flat and even, then all is perfect; but if the hair be staring, the skin scabbed, and the flesh rising, then look for a Ring-bone, or a Crown-scab, or a Quitter-bone

Haring,

en look Quit-

### The setting on of his Head, his Crest and Mane.

After this, stand by his side, and first look to the setting on of his Head, and see that it stand neither too high nor too low, but in a direct line, and that his Neck be small at the fetting on of the Head, and long, growing deeper to the shoulders, with an high, strong, and thin Mane, long, foft, and somewhat curling; for these are beautiful characters: Whereas to have the Head ill set on, is the greatest deformity; to have any bigness or swelling in the nape of the Neck, shewes the Pole-evil, or beginning of a Fiftula; to have a short thick Neck like a Bull, to have it falling at the Withers; to have a low, weak, a thick, or falling Crest, shews want both of strength and mettle: To have much hair on the Mane, sheweth intolerable dulness; to have it too thin, shews fury; and to have none, or shed, shews the Worm in the Mane, the Itch, or else plain Manginess.

# His black Ribs, Fillets, Belly, and Stones.

Look on the Chine of his Back, that it be broad, even and straight, his Ribs well compassed

fhe

are

clot

7

ling

and :

they

T

and

and I

100 A

lut j

lowe Joach

Pigit

urb.

passed and bending outward, his Fillets upright, strong and short, and not above an handful between his last Rib and his Hucklebone; let his Belly be well let down, yet hidden within his Ribs, and let his Stones be close trust up to his body: for all these are marks of health and good perfection, whereas to have his Chine narrow, he will never carry a Saddle without wounding: and to have it bending, or Saddle-backed, shews weakness.

To have his Ribs flat, there is no liberty for

Wind.

To have Fillets hanging, long or weak, he will never climb an Hill, nor carry a Burden.

And to have his Belly clung up or gaunt, or his Stones hanging down, loose, or aside, they are both signs of sickness, tenderness, foundring in the body, and unaptness for labour.

### His Buttocks.

Then look upon his Buttocks, and fee that they be round, plump, full, and in an even level with his body: or if long, that they be well raifed behind, and spread forth at the fetting on of the Tayl, for these are comely and beautiful. The narrow Pin-buttock, the Hog or Swine-rump, and the falling and down-let-buttock are full of deformity, and shew

shew both an injury in Nature, and that they are neither fit (or becoming) for Pad, Footcloth, or Pillion.

## His Tayle.

there is a good Buttock, the Tayl can never stand ill; and where there is an evil Buttock there the Tayl can never stand well: for i ought to stand broad, high, slat, and coucher a little inward.

Thus I have shewed you the true shape and true deformities, you may in your choice

please your own fancies.

# An uncontroulable way to know the age of an Horse.

There are seven outward Characters, be which to know the age of every Horse, namely, his Teeth, his Hoofs, his Tay

his Eyes, his Skin, his Hair, and the Bars in his mouth.

### His Teeth.

If you will know his Age by his Teeth, you must understand that an Horse hath in his Head just forty Teeth; that is to say, Six great Wong-teeth above, and six below on one side, and as many on the other, which maketh twenty four, and are called his Grinders: Then six above, and six below, in the fore-part of his mouth, which are called Gatherers, and make thirty six: Then sour Tushes, one above, and one below on one side, and are called the Bit-Teeth, which maketh just forty.

Now the first year he hath his Foalsteeth, which are only his Grinders and Gatherers, but no Tushes, and they be small, white,

and bright to look on.

be lean.

ur. I

his Pa

hele bu

when

ur choi

be

The fecend year he changeth the four fore-most teeth in his Head, that is, two above, and two below in the midst of the rows of the Gatherers, and they are browner and bigger than the other.

The third year he changeth his Teeth next unto them, and leaveth no apparent Foalsteeth before, but two above, and two below of each fide, which are also bright and small.

The

The fourth year he changeth the Teeth next unto them, and leaveth no more Foalsteeth but one of each fide, both above and

below.

The fifth year his foremost teeth will be all changed; but then he hath his Tushes on each side compleat, and the last Foals-teeth which he cast, those which come up in their places, will be hollow, and have a little black speck in the midst, which is called, the Mark in the Harses mouth; and continueth till he be past eight years old.

The fixt year he putteth up his new Tushes, near about which you shall see growing a little of new and young stess, at the bottom of the Tush: besides, the Tush will be white, small,

short, and sharp.

The feventh year all his Teeth will have their perfect growth; and the Mark in the Horses mouth (before spoken of) will be plainly seen.

The eighth year all his Teeth will be full, smooth, and plain; the black speck, or mark, being no more but discerned, and his Tushes

will be more yellow than ordinary.

The ninth year his foremost-teeth will be longer, broader, yellower, and fouler than at younger years, the Mark gone, and his Tushes will be bluntish.

The tenth year in the in fide of his upper-

Tushes

mark,

uhes

11 10

The thirteenth year his Tushes will be wornmewhat close to his chaps (if he be a much idden Horse) otherwise they will be black, bul and long, like the Tushes of a Boar.

# His Hoofs.

If a Horses Hoofs be rugged, and as it ere seamed one seam over another, and may seams; if they be dry, full and crusty, or umbling, it is a fign of very old age: and on e contrary part, a smooth, moist, hollow, id well founding Hoof, is a fign of young ars.

## His Tayl.

If you take an Horse with your finger and ur thumb by the stern of the Tayl, close at e fetting on by the Buttock, feeling there hard. hard, if you feel of each fide the Tayl a joynt flick out more than any other, by the bigues of an hazel nut, then you may presume the Horse is under ten years old: but if his joynts be all plain, and no such thing to be felt, then he is above ten, and may be thirteen.

### His Eyes.

If an Horses Eyes be round, full, staring or starting from his Head, if the pits over them be filled, smooth and even with his temples and no wrinckles either about his Brow, o under his Eyes, then he is young; if other wise you see the contrary characters, it is a sign of old Age.

### His Skin

yo

If you take an Horses Skin in any part of his body, betwixt your finger and you thumb, and pull it from his sless, then letting it go again, if it suddenly return to the plasmom whence it came, and be smooth and plaswithout wrinckle, then he is young, and stofferength; but if it stand, and not return instantly to its former place, then he is ye old, and wasted.

### His Hair

joyn

joynts

, then

other

y part nd you en lestin

10151

If an Horse that is of any dark colour, shall grow griffel only about his Eye-brows, or underneath his Mane; or any Horse of a whitish colour shall grow meanneled with either black or red meannels universally over his body, then both are signs of old age.

### His Barrs.

Lastly, if the Barrs in his mouth be great, deep, and handle rough and hard, then is the Horse old: but if they be soft, shallow, and handle gently and tenderly, then is the Horse young, and in good ability of hody.

And thus much is spoken touching the Office of the Buyer.

K2 THE

# FARRIER:

011

yel

wit

brea

and

refer Horn feetic

or lec

Hay first

The Signs of all Sicknesses, and how to discern them.

Fyou find in your Horse heaviness of Countenance, extream Loosness, or extream Costiveness, shortness of Breath, loathing of Meat, dull and imperfect Byes, rotton or dry Cough, staring Hair, or Hair unnaturally discoloured, a staggering Pace, frantick Behaviour, yellowness of the Eyes or Skin, faint or cold Sweat, extraordinary lying Down, or beating or looking back at his Body, alteration of Qualities or Gestures, not casting of the Coat, Leanness, Hide-bound, and the like. All these are apparent signs of Distemperature and Sickness.

Signs from the Dung.

It is necessary to observe the Horses Dung, for

for it is the best Tel-troth of his inward parts; yet you must not judge it by a general opinion, but by a private discourse with your self how he hath been fed, because food is the only thing that breeds alterations, ---- as

thus, -

p

1111-

30-

eat,

ugh, red,

0110 eats

OK-

MIS

ean-

ick-

If he feed altogether upon Grass, his Dung hath one complexion, as green; if upon Hay, than another, as a little more dark: If upon little Provender, then inclining to yellow. But to avoid both curiofity and doubt, observe well the complexion of his Dung, when he is in the best health, and the best seeding; and as you find it alter, so judge either of his health or sickness, as thus

If his Dung be clear, crisp, and of a pale yellowish complexion, hanging together without separation, more than as the weight breaks it in falling, being neither so thin nor to thick, but it will a little flat on the ground ? and indeed, both in favour and substance, resembling a sound man's ordure, then is the Horse clean, well fed, and without imper-

fection.

If it be well coloured, yet fall from him in round knots, or pellets, so it be but the first or second Dung, the rest good, as aforesaid, it matters not; for it only shews he did eat Hay lately, and that will ever come away first. But if all his Dung be alike, then it is a

fign of foul feeding, and he hath either too much Hay, or eats too much Litter, and too little Corn.

1

cer

you

ning

Sine

If his Dung be in round pellets, and blackish, or brown, it shews inward heat in the

body.

If it be greafie, it shews foulness, and that grease is molten, but cannot come away. If he void grease in gross substance with his Dung, if the greafe be white and clear, then it comes away kindly, and there is no danger: but if it be yellow or putrified, then the grease hath lain long in his body, and fickness will follow if not prevented.

If his Dung be red and hard, then the Horse hath had too strong hears, and costiveness will follow: if it be pale and loofe, it shews inward coldness of body, or too much moin

and corrupt feeding.

# Signs from the Urine.

Though the Urine be not altogether so material as the Dung, yet it hath some true faces, as thus -

That Urine which is of a pale yellowish colour, rather thick than thin, of a strong fmell and a piercing condition, is a healthful, found, and good Urine: but if it be of an high, red complexion, either like blood, or inclining inclining to blood, then hath the Horse had either too sore Heats, been over-ridden, or ridden too early after Winter grass.

If the Urine be of an high complexion, clear and transparent, like old March Beer, then he is inflamed in his body, and hath ta-

ken some surfeit.

If the Urine carry a white cream on the top, it shews a weak Back, or consumption of Seed.

A green Urine shews consumption of the

Body.

100

n the

that

then

iger:

thé

forse

heurs

A Urine with bloody streaks, shews an Ulcer in the Kidneys: and a black, thick, cloudy Urine, shews death and mortality.

# Of Sickness in general.

Whensoever, upon any occasion, you shall find the Horse droop in countenance, to for-sake his meat, or to shew any other apparent sign of sickness; if they be not great, you may forbear to let blood, because where the blood is spent, the spirits are spent also, and they are not easily recovered. But if the signs be great and dangerous, then by all means let blood instantly, and for three mornings together (the Horse being sasting) give him half an ounce of the Poucler (called by me) Diahexaple, and by the Italians, Re-

K 4

gina Medicina, the Queen of Medicines, brewed either in a pint of Muskadine or Malmfey, or a pint of the fyrup of Sugar, being two degrees above the ordinary Molosses, or for want thereof, Molosses will serve the turn; and where all are wanting, you may take a pint either of Dragon-water, or a quart of the sweetest and strongest Ale-wort, or in extremity, take a quart of strong Ale or Beer, but then warm it a little before the fire.

the

tre-

fthe

lome

CWO

aple,

rubut

aule

oth

the

, 1

will here fet down the true manner of making this admirable Pouder, together with the virtues and operations thereof.

# The true manner of making the true Diahexaple.

Take the Roots of round Aristologia, wash them, scrape them, and purifie them as clear as may be, then take Juniper-berries unexcorticated, and Bay-berries excorticated; take the purest and best drops of Myrrh, and the finest shavings of Ivory, of each an equal quantity; beat all but the Myrrh together, and seirse them sine: Lastly, beat the Myrrh, and seirse it also; then mix and incorporate all together, press it hard into a Gally-pot, and keep it, and use it as you have occasion.

# The Virtues of true Diahexaple.

This Pouder, or indeed Methridate, called Diahexaple, or the Queen of Medicines, is most excellent and soveraign against all manner of oyson, either inward or outward; it cureth he bitings of venemous Beasts, and helpeth hort wind and pursickness. Dodoneus.

It mundifieth, cleanseth, suppleth, and naketh thin all gross Humours, it healeth all lifeases of the Liver and Stomach, helps Digestion,

digestion, and being given in a pint of Sack, it cureth all Colds: it is good against Consumptions, breaks Flegm, helps Staggers, and all Diseases of the Head. Gerrard.

them.

Non

It recovers Tyring and Wearines, and takes away Cramps and Convulsions, dries up the Scurvy, breaks the Stone, opens all inward Obstructions, and helps the Yellows, the Gar-

gil, and the Dropfie. Diascorides.

It cures all dileases of the Lungs, as Glanders and Rottenness, gives ease to all Gripings and Windiness of the Belly, provoketh Urine, takes away Infection, and kills Worms. Galen.

# A Drink to open an Horses body, and cleanse it.

Take a quart of new Milk, Sallet-oyl, Honey, each half a pint, an ounce of London-Treacle, and the yolks of fix Eggs beat all together: aud then put to it Liquorish, Sugarcandy, Anniseeds (all in Pouder) of each an ounce, and infuse all together, so give it the Horse, ride him after it, set up warm, and let him sast above an hour.

The true manner of making those cordial Balls, which cure any violent Cold or Glanders, which prevent Heart-sickness, which purge away all molten Grease, which recover a lost Stomach.

up the

nd

151, Ho.

London-

2110-

each ax

and les

al Balls

landers

p purg

stomach, which keep the heart from fainting with exercise, and make a lean Horse fat suddenly.

Take Annifeeds, Cominfeeds, Fenugreek feeds, Carthumus-feeds, Elicampane-roots, and Colts-foot, each two ounces beaten, and searced to a fine dust, two ounces of the flower of Brimstone, then take an ounce of the juyce of Liquorish, and dissolve it on the fire in half a pint of White-wine; which done, take an ounce of Chymical oyl of Annifeeds, then of Sallet-oyl, Honey, and the lyrup of Sugar, or for want of it, Molosses, of each half a pint : then mix all this with the former Pouders. and with as much fine Wheat-flower as will bind and knit them all together; work them into stiff paste, and make thereof Balls somewhat bigger than French Walnuts, hull and all, and so keep them in a close Gallipot, (for they will last all the year: ) Yet I do not mean that you shall keep them in the Pot in Balls: for so, because they cannot lye close, the air may get in, and do hurt; as also the strength of the Oyls will sweat outward, and weaken the substance, therefore knead the whole lump of Paste into the Gallipot, and make the Balls as you have occasion to use them.

Now for the use of these Balls, because they

they are Cordial, and have divers excellent Virtues; you shall understand, that if you use them to prevent Sickness, then you shall take a Ball, and anoint it all over with sweet Butter, and give it the Horse in the morning in the manner of a Pill, then ride him a little after it ( if you please, otherwise you may chuse) and seed and water him abroad, or at home, according to your usual custom. And thus do three or four mornings together.

If you use them to cure either Cold or Glanders, then use them in the same manner for a week together. If you use them to satten an Horse, then give them for a fortnight together. But if you use them in the nature of a Scouring, to take away molten grease and foulness, then instantly after his Heat, and in his Heat.

Again, if you find your Horse at any time hath taken a little cold, as you shall perceive by his inward rathing, if then you take one of these Balls, and dissolve it in a pint of Sack, and so give it the Horse, it is a present remedy.

Also, to dissolve the Ball in his ordinary water, being made luke-warm, it worketh the

like effect, and farneth exceedingly.

To give one of these Balls before Travel, it prevents Tyring; to give it in the height of Travel, it refresheth the weariness; and to give it after Travel, it saves an Horse from all surfoit and inward sickness.

# For the Bots, or any Worms.

Take a quart of new Milk, and as much Honey as will make it extraordinary fweet; the being luke-warm, give it the Horse early, he having fasted all the night before, then bridle him up, and let him stand tyed to the empty Rack for two hours; then take half a pint of white Wine, and dissolve into it a good spoonful or more of black Sope, and being well mixt together, give it him to drink; then ride and chase him a little, and let him fast another hour, and the Worms will avoid.

# Another for Worms more ready, more easie.

Take the foft Down-hairs that grow in the Ears of an Horse, and which you clip away when you coule him, and the little short tute which grows on the top of the Fore-head, underneath his fore-top; and having a pretty luantity, mix them with a pottle of Oats, and ive them to the Horse, and it helpeth.

## A Purgation when an Horse is sick of Greafe, or Costivenes.

Take a Pint of old white Wine, and on the fire dissolve it into a lump (as much as an Hens-egg) of Castle-sope, and stir them together, then take it off, and put into it two good spoonfuls of Hempseed beaten, an ounce of Sugar-candy in pouder, and brew all together, then having warmed the Horse, to stir up his greafe and other foul humours, give him this to drink, and walk him up and down a little after it, to make the Potion work; then fet up warm, and after a little stirring him in his Stall, if he grow fickish, give him liberty to lye down; then after two hours fasting give him a sweet Mash, then feed as at other times.

### For Laxativeneß, or extream Loofeneß.

Take a quart of red Wine, and on the fire, put into it an ounce and an half of Bolarmony in pouder, and two ounces and an half of the Conserve of Sloes, mix them together; after take it from the fire, and put to it a spoonful or two of the pouder

it be in Travel, then give it in sweet Wine or strong Ale; but if in Ale, then take a quart, and give it both before Travel, and in your Inn, or at home immediately after Travel.

To break a festered Cold, or dry up Glanders, and to heal the Olcer, or Canker in the Nose.

Take a pint of Verjuice, and put to it so much strong Mustard (made with Wine-vine-gar) as will make it strong and keen thereof; then take an ounce of Roach Allom in Pouder, and when you give this to the Horse, as you fill the horn, so with a knise or spoon, pur some of the Allom into the horn, and so give it the Horse part at both nostrils, but especially that nostril which runneth most; then ride him a little after it, and set up warm, and give no cold Water but with exercise. Thus do divers mornings.

### For the Glanders.

Take Cominseeds, Grains, and Fenugreek in pouder, of each half an ounce; of Diahexaple, a quarter of an ounce; beat this in a Mortar with a quarter of a pint of Verjuice, three spoonfuls of Sallet Oyl, and two L2

spoonfuls of Aqua-vita, then put all together to a quart of old Ale, with a good slice of sweet Butter, and set it on the fire till it be ready to boyl; then being luke-warm give it the Horse, part at the Mouth, and part at both Nostrils: then ride him pretty roundly for an hour, and set up warm; let him sast an hour, and if you perceive sickness to grow, give him a pint of new Milk.

### To ftay the Glanders for a time, being incurable.

Take the green bark of Elder, and beat it in a Mortar, and strain it till you have a pint thereof; then put that Juyce to a pint of old Ale, and warm it on the fire with a good lump of sweet Butter, and an ounce of Sugar-candy, and so give the Horse; ride him after it, let him sast an hour, and keep warm. Do thus divers mornings.

# For decayed or stopped Lungs, which we call Broken-wind.

Take balf a pint of Colts-foot-water, or the fyrup of Colts-foot; but in the fyrup it will best dissolve; and put into it a dram of Balfamum Sulphuris, and give it the Horse in the morning fasting; then ride him a little little : no col very

little after it, be sure to keep warm, and give no cold Water without exercise. Do thus every other morning, giving it one morning at the Mouth, and another at the Northils, till you find amendment.

A Scouring when others will not work,

Take of sweet Butter a quarter of a pound, half so much Castle Sope, and half an ounce of Aloes, beat them together: then add of Hemp-seed two spoonfuls, of Rosin half a spoonful, of Sugar-candy an ounce; all bruised sine, work it into a Paste, and give it the Horse in Balls immediately after his Heat, or when you have warmed him, and stirred up the grease and foulness within him.

L 3

Out-

# OUTWARD

# SORRANCES.

# The Signs of outward Sorrances.

Outward Sorrances are discerned when any member or part in an Horse is disfigured or evil affected by the loss of true shape, disability in motion, the increase or decrease of number and quantity, the disproportion of place, or the separating of things knit and united. And these accidents have divers names, as Imposthums, Ulcers, or Wounds when they are in slessy parts: Excretions or Fractures on and in the bones; Ruptures in the Veins, Convulsions in the Sinews, and Excoriations upon the skin.

The first is known by outward Swellings, rotten or bloody Sores; the next by utter disability in the member, or else plain halting: The next by Wens and Knots both soft and hard; the next, by Gordgings and Haltings;

and the last, by Scurf and Leprosie.

Now forasmuch as the greatest part of Sorrances.

Sorr hid I wi

Leg,

ther, should

like, old ho

new, betwie

his Wi

Stable, then fer

no Pric

Coffin-If his

the fore

foot furthere.

Places b

Sorrances, and especially those which are most hid and obscure, are found out by halting; I will shew you the several manner of haltings, and what they signific.

If the Horse halt before, and list not up his Leg, but in a manner traileth it after the other, it shews a new hurt on the top of the

shoulder .: w store short to aski

when

f true

le or

lilpro-

ave di-

Jounds

ns or

scoria"

er dil-

alting:

ft and

art of

If he cast his Leg outwards or go Baker-like, and not bend the Knee, theis either an old hurt on the top of the Shoulder; or if new, then it is a Shoulder-plat, or rending betwixt the Shoulder and the Body: If in turning short he favour his Foot, if griping his Withers he complain; if he halt more when he is ridden than led, the offence is on the top of the shoulder: If standing in the Stable, thrust forth his Foot and savour it, then search his Foot; and if in that be found no Prick, no dry Founder, no Surbat, then it is in the mid-part of the Shoulder, or the Cossin-joynt.

If halting he bow down his Head to the ground, and step short and thick; then it is in the fore-part of the Shoulder, at the Breast. If in handling his Elbow hard, he twitch up his Foot studdenly from the ground, the offence is

there.

If on his Shank-bones (in their feveral places be Splents, Excressions, Windgalls, or L 4 Maleanders,

Maleanders, and they fore, they will occasion halting, as any other outward Sorrance upon any other member.

Heat on the Crownet, shews pain in the

Cossin-joynt.

In halting before, to trip on the Toe, shews pain in the Heel; to favour the Toe, shews pain in the Toe; to halt more on uneven ground than on the even, shews pain in the Feet; and in going from you, and coming to you, may be discerned, whether the outward or inward quarter: But to clear all doubts, the Pincers will shew any pain in the Foot whatsoever.

If your Horse halt behind, and in halting go side-long, and not in an even line, the grief is in the Hip, and yet but new, or in the Fillets, and may be new or old; if it be old in the Hip, the Hip will fall, and then no cure.

If in halting he tread only on his hinder-Toe, and no offence in the Foot, then the pain is in the Stiffel. If in halting he bend not his Hough or Ham, and no outward Sor-

rance, yet the pain is there.

If he halt through any offence in his Leg, from the Ham to the Pastern, outward Sorrance, or Swelling will shew it; and so likewise for the other parts below it.

DOW

For any Splent, Spaven, Curb, Ring-bone Excression.

First, clip away the Hair as far as the Excression goeth, and a little more; then take a piece of Allum'd Leather, made as big as the place you have bared, and fitted to the same proportion: then take a little Shooemakers Wax, and spread it round about the very edge or verge of the same, leaving all the inward part empty and not touched with the Wax. Then take the Herb Speargrass, or Spearwort, which hath the virtue to raise Blisters; and bruising it, lay some thereof upon the Leather in the empty place, and bind it fast thereon, suffering it so to lye (if it be in the Spring, or Summer-time,

when the Herb hath its full strength) near half a day; but if it be in Winter, then it is not amiss (to renew the strength of the Herb) if you ad to it a drop or two of the Oyl of Origanum, and let it lye half a day fully, and be sure to tye up the Horses head, for fear of biting it away.

When you take away the Herb, rub the place well, and anoint it with Train-oyl warm,

or else lay on a Diminium Plaister.

#### Another for a foul Splint.

Take Nerve-oyl one ounce, Cantharides the weight of fix pence, and as much of the Oyl of Vipers, boyl them lightly; then with this anoint the Splint cross the hair, and heat it in with a Hot Iron, then tye up the Horses head to the Rack for 24 hours: then squeeze out the corruption; and do this twice or thrice.

### For a Splint, and to dry up Windgals.

First, heat the Sorrance with an hot Pressing Iron, then vent it in several places with your Fleam; then take a spoonful of Salt, half a spoonful of Nerve-oyl, a penny weight of Verdigrease, and the white of an Egg; beat all to a Salve, and dipping Flax hurds therein, apply it to the grief.

## For Pains, Mules and Rats-tails.

First, take away all the Scabs and make the Sore raw, then with strong Mustard made with wine-vinegar, anoint them all over, and do this every night. The next morning, take half a pound of green Copporas, and boyl it in a postle of running water, with an bandful of Sage, and so much Hyssop, a quarter of a pound of Allum, and as much strong Mustard; and with this bathe the Sore twice or thrice a day.

#### For Maleander or Selander.

Take the oyl of Bay an ounce, half so much Sugar, and a good quantity of the oyl or froth which cometh from green Broom-stalks, being laid in the fire: mixit well, and with this anoint the Sores, and it kills and dryes them up.

# For the Swift-cut, and to heal all Wounds.

Take a pint of white Wine, and put to it two or three spoonfuls of Honey, and stir them and boyl them to a Salve; then take it from the fire, and put to it half so much Turpentine as there was Honey, and stir all together.

M 4

With

With this Salve, somewhat hot, anoint the Sores twice or thrice a day, and it is a most speedy healer.

#### For any Maunge or Scab in a clean fed Horfe.

First let blood, then take a quart of old U. rine or Vinegar, and break into it a quarter of a pound of good Tobacco; then fet it on a tire of embers, and not boyl, and so let it stew all night: with this Water wash the infected places, whether it be in the Mane or otherwile, and it helpeth.

#### For any Maunge or universal Leprosie in a foul surfeited Horse.

First, let blood in the Neck-vein, and take away good store; then curry off all the scurf, and take Verjuice and Vinegar a pint, Cowpils a pint, Train-oyl a pint, old Urine a pint, and put to them an handful of wild Tansie, an handful of Bay-salt, a quarter of a pound of Brimstone, as much Allum, two ounces of Verdigrease, and four ounces of Bolearmony, boyl all well together.

With this (very hot) wash the Horse well, and if you put to it the quantity of a pint of blood you take away, it is not amis. Do this For

Take a quart of Tar, and one the fire put to it half a pound of Bores-grease, an ounce of Copperas, a quarter of a pound of Salt-peter, two ounces of Wax, a quart of Honey, a quarter of a pound of Rozin, two ounces of Verdigrease, a quart of Linseed Oyl, and seeth them till half be consumed; then strain it, and keep it close in a pot. Then, when you will use it, take of it warm, and apply it to the Sore, it doth both heal, draw, and make Hair grow.

For a Fiftula, or Pole-evil.

Take Euforbium with Mastick; mix them together, then seeth them well with French-Sope, and make a Tent, and put it into the Fifula, and it will consume the evil moisture.

For a foul Farcy.

Take Tar, and fresh Hogs-grease, of each half a pound, Hemlock an handful, Arsesmart three handfuls, and as many Nettles; boyl these in a pottle of old Urine, and apply it very hot to the Swelling; but touch it not with your hand, for it is too sharp.

Lastly, take a pine of white Wine-vinegar, a quarter of an ounce of Verdigrease, and a little bundle of Hyssop, beat them in a Mor-

tar, and boyl it to an half pint: then with Balls of Flax, put it luke-warm into both his Ears, and stitch the tips together, then tye his head up to the Rack for two hours: Do thus twice.

#### For a most desperate Farcy.

Take the Herb called Clay-clayes, which is a weed growing by the Water-side, (having a great broad round leaf, and is green on the upper-side, and white on the nether) and Rue, of each a like quantity, beat them and strain them: then to a pint of that juyce, put of Housleek a bandful, balf a pint of Aqua-vita, and two good spoonfuls of Pepper beaten and seirled.

Of this Liquor take a pint and give it the Horse to drink; then with round Balls of Flax dipt in the same, stop up both his Ears, then with the strained bruisings of all the Herbs, rub the Sores, and stop the holes if there be any hollowness: Do thus twice at the least.

#### For any Founder or Frettize wet or dry.

First, parethin, open the Heels wide, and take good store of blood from the Toes or shackle Veins (which some hold good); then tack on a Shooe somewhat hollow, broad at the

the heels, and the infide of the web, from the first nail to the heel turned inward, towards the Frog, yet not touch any part thereof, or the Hoof: so that the Horse may tread on the out verge of the shooe, and not on the inwards then take Burgundy-pitch, and rolling it in a little fine Cotton-wooll or Bombast, with an hot Iron melt it into the foot betwixt the shooe and the toe, till the orifice where the blood was taken be filled up; then take a pound of Hogs-grease, and melt it, and mix it with Wheat-bran, till it be as thick as a Pultiss: then boyling-hot stop up the Horses feet therewith, then cover it with a piece of an old shooe, and splent it up, and so let him stand for three or four dayes: then if occasion serve, you may renew it; or otherwise, the cure is wrought.

#### To make Hoofs to grow quickly, and to be tough and strong.

Take Allum, the juyce of Garlick, of each seven ounces, Rue chree bandfuls, old Hoggsgreafe two pound, of Affes-dung, or for want of it, Cow-dung an bandful; mix them and boyl them together.

With this, both stop the Horses seet, and anoint the crowners of the Hoofs, the Media

#### For brittle Hoofs.

Take Turpentine, Sheeps-suet, unwrought Wax, and Hogs-grease, of each half a pound; Pitch, Rozin, half a pound; Sallet-oyl half a pint, and of Dogs-grease a pound; boyl all together, and keep it in a Gallipot: With this Oyntment anoint the Hooss outwardly, and if you please, tie some of the Oyntment with a cloth to the Crownets, then stop them within with Cow-dung and Dogs-grease mixt together.

For Surbat, or foreness in the Feet, whether by travel, too near paring, or other accident.

Take a lump of course Sugar, and with an hot Iron melt it between the Shooe and the Foot; and when it is hardned, take Nettles and Bay-salt, and stamp them, stop up the Frog of the Foot also.

For a Quitter-bone.

First, Tent it a day or two with Hogs-grease and Verdigrease ground together: then take scalding-hot Hogs-grease and pour it into the the hole, and lay a Plaister of Pitch and Tar mixt over it for 24 hours; then if the Bone rise not, do the same again, and it will rise.

First, ripen it with wet Hay, or rotten Litter; then when it is soft, open it and let out the corruption, then fill the hollowness with the Pouder of Rozen, and lay a Plaister of Shooe-makers-wax over it: and thus do once a day till it be whole. If it be slow in skinning or drying up, throw on the Pouder of un-flackt Lime, and Bolarmony mixt together. But if any proud flesh arise, take it down either with burnt Allum, or Verdigrease in pouder.

Another for a Sore Back.

Take the juyce of Seladine and life-Honey, of each two spoonfuls, beat them with the yolk of an Egg, and with as much Allum and Wheat-flower as will serve to bring it to a Salve; dress the Sore with this once a day; it draweth and healeth.

For a Prick with a Pitch-fork on the Crownet, or other parts.

Take a pottle of Urine, two bandfuls of Mallows, and balf a pound of Boars-greafe, boyl them together, and being reasonable hot, bathe the Legs therewith, then apply the Mallows to the Wound: but if the Swel-

ling ascend upward, and be great; then rope the Leg up, and moist the ropes with his Urine. This is good for any Swelling, whether of grease or otherwise.

#### For any Chafing or Galling.

Make the Sore dry, and then rub it with a raw Egg, thell and all.

A general Salve for any Sore, Swelling, Prick, Cloping or Tread.

Take Turpentine, black Sope, Hogs greafe, green Treat and Pitch a like quantity: mix and boyl them together, and apply it warm, either Plaisterwise or Tentwise.

### Tomake Hair grow in bald places.

Take Sope a quarter of a pound, as much Bears-greafe, and a quarter of a pint of Aquavita; boyl these together, and apply it to the bald places; in a fortnight it will bring Hair.

To Stanch Blood.

Take wild Tansie, and bruise it in your hand, and apply it. Also Primrose leaves used in the like manner have the same effect. Otherwise, take a piece of an old Felt Hat,

FARRIER.

in your leaves effect. 175

and burn it to pouder, and apply it to the Wound, or put it up, or must it up into the Nose if it bleed to stop a norm sound down as hollow

For Enterfering.

Take a sharp and knotted Cord, and draw it from his Dock, between his Legs to the Gyrths, and so ride him, or else rub Starch between his Thighs. This I allow rather for an Horse-coursers Help, than a present Cure.

To tame an unruly Horse, what he may be drenche or dress of any grief

Put into one of his Ears, a little round tharp Flint stone, and gripe it hard therein, if you do so to both, he will be more quiet.
